

**DYNAMIC SYSTEM - RESPONSE OF CROPS
FOR
IMPROVING MANAGEMENT OF IRRIGATION**

**A Thesis submitted to the
INDIAN INSTITUTE OF TECHNOLOGY, DELHI
for the
Award of the Degree of
DOCTOR OF PHILOSOPHY**

BY
YOGESH CHANDRA ARYA
Senior Scientist (Irrigation)
Water Technology Centre
Indian Agricultural Research Institute
New Delhi

January, 1980

ACKNOWLEDGEMENTS

I have few words that can express my gratefulness to Prof. M.C. Chaturvedi, Senior Professor, Indian Institute of Technology, Delhi. He has been very kind to guide and steer me on the right course of the present study. I also acknowledge with gratitude the invaluable guidance and encouragement from Dr. K. Kanungo, Dean and Joint-Director, Indian Agricultural Research Institute, New Delhi.

I carried out the present study as a part-time research scholar while working in the Department of Farm Operations and Management at the Indian Agricultural Research Institute, New Delhi during the years 1973-79. I am grateful to the Director, I.A.R.I., New Delhi for granting me the permission to continue this study while in service.

I am so very grateful to Prof. J.I. Stewart of University of California, Davis for having made me available some of his unpublished data on periodic crop-mass of maize, recorded during the course of

his field experiments in the year 1970. This has been very valuable to me in validating the system-response model of crops. I am very grateful to Prof. S.K. Sinha of Water Technology Centre, Indian Agricultural Research Institute, New Delhi for discussions on the crop-growth behaviour.

I wish to express my gratitude to Mr. Ram Kumar of the Computer Centre at Indian Agricultural Statistics Research Institute, New Delhi and Prof. Daljit Singh of Indian Agricultural Research Institute, New Delhi for their help in computer work. I am grateful to Mr. Hanumant Rao of Water Technology Centre, I.A.R.I., New Delhi for occasional discussions on the modeling work and to Mr. Ranvir Singh of Indian Institute of Technology, Delhi for help in preparation of the copies of the thesis. My thanks are to Mrs. Usha Kiran Arora for help in comparing the typed copies in her spare time.

Lastly, I am very grateful indeed to my wife Bimla, my sons Rajiv and Alok and my daughter Anjali, who could not get the needed attention during the period of this study.

CERTIFICATE

This is to certify that the thesis entitled "DYNAMIC SYSTEM-RESPONSE OF CROPS FOR IMPROVING MANAGEMENT OF IRRIGATION", which is being submitted by Mr. Y.C. Arya to the Indian Institute of Technology, Delhi, for the award of the degree of DOCTOR OF PHILOSOPHY, is a bonafide piece of research work carried out by him under my guidance and supervision. The quality of his thesis fulfils all requirements of the regulations relating to the said degree.

The results contained in this thesis have not been submitted in part or full to any other University or Institution for the award of any degree or diploma.

(M.C. Chaturvedi)
Professor
Applied Mechanics Department,
Indian Institute of Technology,
New Delhi.

TABLE OF CONTENTS

	Page
LIST OF TABLES	
LIST OF FIGURES	
<u>Chapter</u>	
I INTRODUCTION	1
Need of the study	2
The issue for the study	3
The over-view	7
II LITERATURE SURVEY	9
A. The literature interface	11
B. Specific approaches towards estimating response functions for irrigation decision-improvement	15
The quantitative structure of generalised time dependent response function	20
Over-all view of the specific approaches	36
III PROBLEM FORMULATION	41
A. Problem definition	42
Variable condition-determined crop response	43
Estimation of crop response in stages	46
Choosing a time-dependent response variable	52
Transferability of response functions	53
Problem statement	53
B. Dynamic system-response of crops	54
Multi-variable time-dependent response functions of crops	54
The problem of multi-variable interaction quantification	56
Systems approach to estimation of multi-variable response	58
Time-dependent response functions of crops to irrigation	64
Additive separation of crop response to evapotranspiration and nutrient uptake	65

Condition-determined crop response to evapotranspiration	67
Crop sensitivity time-function to evapotranspiration	70
Unit-period crop response function to evapotranspiration	71
C. System identification	73
Intrinsic response characteristics of crops	74
The deterministic biological growth-functions	76
Lumping of intrinsic response characteristics of crops	79
The quantitative structure of excitation related crop growth	81
Generalised versions of growth factor (a) and senescence factor (b)	97
The mathematical model of the generalised dynamic response of crops to evapotranspiration	101
The statement of mathematical model	105
 IV CHARACTERIZATION OF GENERALISED RESPONSE FUNCTIONS OF CROPS	 112
A. General nature of the solution behaviour of mathematical model	115
B. The referencing for characterization	122
Time path of crop-mass under uniform evapotranspiration	123
C. The scale-factor $A(F)$	129
D. Dimensionless form of crop-response representation	133
E. The time-dependent crop sensitivity function for the crop-mass	137
F. The unit-period crop response function	140
G. The unit-period crop sensitivity to period relative evapotranspiration	147
H. The discrete form of crop-mass response function and maturity-time crop-mass response	149
I. Condition-determined response during a period	156
 V. HYPOTHESIS VALIDATION	 160
A. Validation for system linearity of mathematical model (3.60a)	163
Validity for system linearity of crop response to evapotranspiration time-path at the same fertility level	163

Validity for system linearity of crop response to the evapotranspiration time-path at different fertility levels	173
B. Validity of mathematical model (3.60a) for quantifying the crop-mass function in relation to relative evapotranspiration	177
Validity of mathematical model (3.60a) under assumption of deterministic $A(F)$	178
Validation using the observed fractional crop-mass data	179
Validation using the period crop-mass data	186
Validity of mathematical model (3.60a) for time invariance under assumption of uncertain $A(F)$	192
The difference form of mathematical model (3.60a) for parameter estimation	194
Application of sequential parameter estimation theory of Sage and Melsa (1971)	196
Time invariance of quantifying parameters	199
C. Validity of mathematical model (3.60a) and (3.60b) for maturity time economic crop yields	217
VI CONCLUSION	226
