

**SEPARATION OF ETHANOL FROM  
ETHANOL-WATER SYSTEM BY  
MEMBRANE TECHNIQUE**

By  
**JYOTI PROSAD CHOUDHURY**

THESIS SUBMITTED TO THE  
INDIAN INSTITUTE OF TECHNOLOGY, DELHI  
FOR THE AWARD OF THE DEGREE OF  
DOCTOR OF PHILOSOPHY

**Biochemical Engineering Research Centre**  
INDIAN INSTITUTE OF TECHNOLOGY, DELHI  
NEW DELHI-110016, INDIA

**April 1987**

CERTIFICATE

This is to certify that the thesis entitled 'Separation of ethanol from ethanol-water system by membrane technique' submitted by Jyoti Prosad Choudhury has been prepared under our supervision in conformity with rules and regulations of the Indian Institute of Technology, Delhi. The research report and results presented in the thesis have not been submitted for any degree in any other University.

**(B.K. Guha)**  
Asstt. Professor  
Chemical Engg. Department  
I.I.T., Delhi

**(P. Ghosh)**  
Associate Professor  
Biochemical Engg. Res. Centre  
I.I.T., Delhi

(ii)

### ACKNOWLEDGMENTS

I express my sincere gratitude to my research supervisors, Dr. Purnendu Ghosh and Dr. Barun K.Guha for their encouraging, dynamic and fruitful guidance, stimulating discussions and keen interest shown throughout the period of this investigation.

I am also grateful to Prof. T.K.Ghose and Prof. K.Das who initiated me in the field of Reverse Osmosis research.

I am thankful to Prof. S.N.Mukhopadhyay, Prof. K.S.Gopalkrishnan, Dr. K.B.Ramachandran, Dr. Subhash Chand, Dr. G.P.Agarwal and Dr. V.S.Bisaria for their valuable suggestions and cooperation.

I am extremely thankful to all friends at BERC for their help and appreciation which encouraged me during the progress of research.

Mrs Neera Verma, M/s V.K.Ghosh, Shiv Singh, J.A.Khan, Mrs. Mathai and Miss Sunita Abrol are also acknowledged for their help and cooperation.

*Jyoti Prosad Choudhury*

LIST OF FIGURES

- 1 a. Reverse osmosis separation unit.
- 1 b. Schematic of reverse osmosis separation unit
- 2 a. Scanning electron micrograph of top surface of styrene grafted cellulose acetate membrane
- 2 b. Scanning electron micrograph of cross section of styrene grafted cellulose acetate membrane
3. Effect of operating pressure on permeate flux at different ethanol feed concentrations for cellulose acetate membrane.
4. Effect of operating pressure on ethanol separation at various ethanol feed concentrations for cellulose acetate membrane.
5. Differential scanning calorimetry curve for cellulose acetate membrane.
6. Differential scanning calorimetry curve for polystyrene.
7. Differential scanning calorimetry curve for blended sample of polystyrene and cellulose acetate.
8. Differential scanning calorimetry curve for styrene grafted cellulose acetate membrane
9. Fourier transform infrared spectra of styrene grafted cellulose acetate membrane.
10. Effect of operating pressure on permeate flux for grafted cellulose acetate membranes of different styrene content.
11. Effect of ethanol concentration on permeate flux for grafted cellulose acetate membranes of various styrene content.

12. Effect of operating pressure on ethanol separation for grafted cellulose acetate membranes with different styrene content.
13. Effect of feed concentration on solute separation of grafted cellulose acetate membrane with different styrene content for ethanol-water system.
14. Effect of operating pressure on permeate flux with styrene grafted cellulose acetate membranes made from different  $\gamma$ - radiation dose levels for ethanol-water system.
15. Effect of feed concentration on permeate flux with styrene grafted cellulose acetate membrane made from different  $\gamma$  radiation dose levels for ethanol-water system.
16. Effect of operating pressure on solute separation with styrene grafted cellulose acetate membranes made from varying  $\gamma$  -radiation dose levels for ethanol-water system.
17. Effect of feed concentration on solute separation with styrene grafted cellulose acetate membranes made from varying  $\gamma$  -radiation dose levels for ethanol-water system.
18. Effect of pressure on solute separation with different styrene grafted cellulose acetate membranes for ethanol-water system.
19. Effect of feed concentration on permeate flux with various styrene grafted cellulose acetate membranes for ethanol-water system.

(v)

20. Effect of temperature on solute separation and permeate flux characteristics of styrene grafted cellulose acetate membranes for ethanol-water system.
21. Effect of permeate viscosity on permeate flux of styrene grafted cellulose acetate membrane for ethanol-water system.
22. Effect of pH on solute separation and permeate flux characteristics of styrene grafted cellulose acetate membranes for ethanol-water system.
23. Effect of feed flow on solute separation of styrene grafted cellulose acetate membrane for ethanol-water system.
24. Effect of ethanol concentration in fermented broth on permeate flux for styrene grafted cellulose acetate membrane
25. Effect of ethanol concentration in fermented broth on ethanol separation for styrene grafted cellulose acetate membrane.
26. Correlation between separation efficiency and permeate flux .
27. Plot of  $\left[ \frac{\Delta P}{J_v \mu} \right]$  vs  $\left[ \frac{C_p}{\mu} \right]$  .

LIST OF TABLES

1. Composition of casting solutions at various styrene concentrations and  $\gamma$  - radiation dose levels for different membranes
2. Characteristics of different non cellulosic membranes.
3. Comparison of permeate flux and separation efficiency using fermented broth and aqueous ethanol solution.
4. Values of reflection coefficient and solute permeability.
5. Estimated values of membrane transport parameters.
6. Ethanol separation by reverse osmosis.
