# Certificate

We are satisfied that the thesis entitled *Weight of a Group and Unit Group of Group Rings* submitted by *Ms Megha Gupta*(2003MAZ0001) is worthy of consideration for the award of the degree of Doctor of Philosophy and is a record of the original bona fide research work carried out by her under our guidance and supervision. The results contained in this thesis have not been submitted in part or full to any other university or institute for the award of any degree or diploma.

# Acknowledgements

*I express my deep sense of gratitude to my supervisors, Prof. R. K. Sharma and Prof. J. B. Srivastava, for their constant support, encouragement and constructive suggestions throughout my thesis work. Their wide knowledge and logical way of thinking have been of great value for this thesis. I am grateful for their detailed and constructive comments.*

*I am thankful to IIT Delhi authorities for providing me the necessary facilities for smooth completion of my work. I would like to extend my appreciation to my SRC (Student Research Committee) members Prof. Wagish Shukla and Prof. S. D. Joshi, as well as to all the faculty and staff of the Department of Mathematics, IIT Delhi for their encouragement. Also I would like to thank the IRD for providing me financial assistance by awarding me a research fellowship during my Ph.D research work.*

*I would like to express my sincere gratitude to Prof. Suresh Chandra for providing me unflinching encouragement and support in various ways. I am privileged to have the opportunity to come in contact with him. I don't have words to thank my friend Reshma for providing me a comfortable and joyful environment throughout my Ph.D. I am very thankful to my colleague Kanchan for endless discussions, support and her everlasting smile. I would also like to thank my batch mates for providing me a congenial atmosphere with their company. I would like to extend my thanks to my*

*seniors for their support.*

*It is beyond the scope of any acknowledgement for what I have received from my parents, yet I make an effort to express my heartfelt and affectionate gratitude for their co-operation and patience during the preparation of this work. My special gratitude is due to my sisters Jyoti and Sonia for their love, affection and keen interest in my progress throughout my work. I owe my thanks to my husband, Saurabh for always being by my side. Without his encouragement, endless patience and understanding it would have been impossible for me to complete this work. I am very much thankful to my parents in-laws and brother in law who were always with me in much needed time with all their support and patience. I am forever indebted to my entire extended family for their encouragement.*

*Above all I thank God for making this thesis possible.*

# Abstract

A group  $G$  is said to have finite weight if  $G$  is normally generated by a finite subset, i.e.,  $G = \langle X \rangle_N =$  the normal closure of  $X$  in  $G$ , for some finite subset  $X$  of  $G$ . The weight  $w(G) = n < \infty$  if  $n$  is the least positive integer such that  $G = \langle X \rangle_N$  where  $X$  has  $n$  distinct elements. P. Kutzko (1976) proved that *if  $G$  is a group of finite weight and the lattice of normal subgroups of  $G$  contained in the commutator subgroup  $G'$  satisfies the minimum condition then  $w(G) = w(G/G')$* . Thus  $w(G) = w(G/G')$  for any finite group  $G$ . A. H. Rhemtulla (1981) carried this study further. It follows that if  $G$  is a solvable group of finite weight then  $w(G) = w(G/G')$ .

We have studied groups for which conditions of finite weight and finitely generated are equivalent. More classes of groups have been found out for which  $w(G) = w(G/G')$ . We have proved that nilpotent groups of finite weight are finitely generated. Further it is shown that nilpotent groups of weight 1 are cyclic. An example of a solvable group of finite weight is constructed which is not finitely generated. For an FC group  $G$  of finite weight it is shown that  $w(G) = w(G/G')$  and also that  $G$  is finitely generated. For solvable by FC groups of finite weight and for finitely generated FC-nilpotent groups it is proved that  $w(G) = w(G/G')$ . Further, for any group  $A$  and a non torsion group  $B$  of finite weight such that the set of all torsion

elements of  $B$  form a subgroup, it is shown that in case of unrestricted wreath product  $w(A Wr B) = w(B)$ . The weight of linear groups  $GL_n(K)$ ,  $UT_n(K)$  and  $T_n(K)$ , for any field  $K$  have been computed. Also weight of all  $p$ -groups of order  $p^n$ ,  $n \leq 5$ ,  $p$  an odd prime are obtained. The weight of all groups of order up to 100 have been tabulated.

For the dihedral group  $D_{2n}$  of order  $2n$ , we completely characterize the bicyclic units in the integral group ring  $\mathbb{Z}D_{2n}$  for all  $n$ . We prove that the index of the subgroup generated by all bicyclic units in the unit group  $\mathcal{U}(\mathbb{Z}D_{2n})$  is infinite except when  $n = 3, 4$  and  $6$ . We compute this index when  $n = 3, 4$  and  $6$ . We determine the number of distinct Bass cyclic units up to inverses in  $\mathbb{Z}D_{2p}$  and  $\mathbb{Z}D_{4p}$ , for any odd prime  $p$ . We aim to give a characterization of  $\mathcal{U}_1(\mathbb{Z}D_{10})$  that highlights the role of bicyclic units. Further we study the relationship between weight of certain groups and the unit groups of integral group ring.

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Weight of a Group</b>	<b>9</b>
<b>3</b>	<b>Weight of Some Special Classes of Groups</b>	<b>17</b>
3.1	Weight of linear groups . . . . .	17
3.2	Finite $p$ - groups . . . . .	20
3.3	Weight of groups of order up to 100 . . . . .	25
<b>4</b>	<b>Bicyclic and Bass Cyclic Units in <math>\mathbb{Z}D_{2n}</math></b>	<b>67</b>
4.1	Bicyclic Units . . . . .	68
4.2	Bass Cyclic Units . . . . .	71
<b>5</b>	<b>Unit Group of <math>\mathbb{Z}D_{10}</math></b>	<b>77</b>
