

CHROMIUM REMOVAL FROM INDUSTRIAL EFFLUENTS USING FUNGAL ISOLATE

by

SHWETA SHARMA (NEE KAUSHIK)

Centre for Rural Development and Technology

Submitted

In fulfillment of the requirements of the degree of

DOCTOR OF PHILOSOPHY

to the

**INDIAN INSTITUTE OF TECHNOLOGY DELHI
JUNE 2009**

CERTIFICATE

This is to certify that the thesis entitled **“Chromium Removal from Industrial Effluents using Fungal Isolate”** being submitted by **Ms. Shweta Sharma (nee Kaushik)** to the Indian Institute of Technology Delhi for the award of the degree of ‘Doctor of Philosophy’ is a record of bonafide research work carried out by her. She has worked under our guidance and supervision and has fulfilled the requirements for the submission of this thesis. To the best of our knowledge the results contained in this thesis have not been submitted in part or full to any other University or Institute for the award of any degree or diploma.

(Dr. Anushree Malik)

(Prof Santosh Satya)

Centre for Rural Development and Technology
Indian Institute of Technology, Delhi

ACKNOWLEDGEMENTS

Ohm Namah Shivay

I would like to take this opportunity to express my deep sense of gratitude to Prof Santosh Satya and Dr Anushree Malik whose academic excellence and constant encouragement guided me through the work all the way and all the time. Their valuable analysis, suggestions and personal affection instilled immense confidence in me throughout my research work. I am honored to receive holistic vision and values from my revered supervisors.

I would like to thank Prof T.R.Sreekrishnan and Prof Manisha Dastidar for their valuable suggestions and expert advice throughout the course of this work. My special thanks to Dr Satyawati Sharma and all the faculty members of Centre for Rural Development and Technology (CRDT) for extending all the necessary help in completing this work. I gratefully acknowledge Dr Hitendra Malik for his constant encouragement and valuable suggestions from time to time.

I would like to extend special thanks to Prof P.L. Dhar, Head, CRDT for providing the necessary infrastructural support and guidance at important stages of the work. Infact facilities in newly developed Applied Microbiology Lab (jointly CBME – CRDT) has been a boon to my research work. Facilities availed from SAIF division, AIIMS Delhi for TEM; Department of Textile Technology, IIT Delhi for SEM – EDX and Centre for Biomedical Engineering, IIT Delhi for FTIR are gratefully acknowledged.

I wish to put on record my thanks to laboratory and office staff of CRDT. I express my sincere thanks to Dr Kavita Arora, Ms Richa Baranwal, Ms Kalpana Arora for the love, care and pleasant company throughout. My lab mates especially Amit Tyagi, Abhishek Mishra, Asheesh Yadav, Piyush and friends at CRDT deserve a special mention for their help and cooperation. My sincere thanks to Ms Prachi Kaushik for being a great source of strength, and providing strong support in experimental work as well as in the final stage of

thesis submission. I also acknowledge the inputs given by Mr. V. K. Ghosh in carrying out the experimental work.

Special words of gratitude to my parents-in-law whose love and support was instrumental in letting me concentrate well on my thesis.

The cooperation and moral support lend by my husband Mr. Avnish Sharma is highly acknowledged. My hearty thanks to him for showing extreme patience.

Last but not the least I am ever indebted to my parents and siblings whose love and blessing brought me up to here.

Shweta Sharma (nee Kaushik)

ABSTRACT

Present study is an attempt to develop a suitable operational strategy for biological removal of Cr (VI) from effluents of small-scale industries. To begin with, a Cr (VI) resistant fungal strain was isolated from an industrial effluent and has been identified as *Aspergillus lentulus* by 28S rDNA sequencing. This fungal strain could tolerate upto 550 mg/l of Cr (VI) and caused 100% Cr (VI) removal and 78% total Cr removal at 100 mg/l initial concentration within 120 hours. *A. lentulus* also displayed special ability to grow over a broad range of pH, temperature, salinity and high concentration of Cr (VI). Surprisingly so far no study has been reported on heavy metal removal using *A. lentulus*. The mechanism of Cr (VI) tolerance and removal by *A. lentulus* was also investigated employing Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM), and Energy Dispersive X-ray Spectroscopy (EDXS) along with the mass balance of Cr. The results revealed that chromium removal by growing *A. lentulus* takes place by several mechanisms such as sorption, bioaccumulation within cells as well as extracellular reduction.

Identification of the critical component in the nutritional requirements of *A. lentulus* using response surface methodology (RSM) showed that yeast extract was most important component while glucose played only a supportive role for growth and Cr (VI) removal by *A. lentulus*. Thus, a significant enhancement in Cr (VI) removal from 68 % to 99.8 % could be obtained using optimized media. In view of high cost and certain constraints in procurement of commercial media in remote rural areas, alternative media sources based on locally available biomass were explored. A new medium using *Leucaena leucocephala* pods and *Sesbenia* sp. seeds together as sole carbon and nitrogen source for substituting glucose and yeast extract has been developed. Alternative medium

performed well for growth of the above fungus and complete removal of Cr (VI) upto 50 mg/l of initial concentration [coinciding with concentration in Combined Effluent Treatment Plant (CETP) effluent used in the present study] was achieved. The cost of alternative medium was found to be 1/10th of the commercial media. In the non-growing mode (resting, immobilized, autoclaved) also, *A. lentulus* performed well at pH 2, however the system was very much sensitive to pH conditions. In order to see the feasibility of *A. lentulus* under field conditions, Cr (VI) removal studies were conducted with actual industrial effluents using both growing and non growing biomass. In CETP effluent, where Cr (VI) initial concentration was 47 mg/l, complete removal was obtained. However, while treating the electroplating effluent (initial Cr (VI) concentration = 259.1 mg/l) 87%, 75% and 91% removal was obtained by growing, resting and autoclaved biomass, respectively. Finally, for facilitating the field applicability of *A. lentulus*, its formulations using a few organic bases were developed and evaluated in terms of shelf life and Cr (VI) removal. Rice based fungal formulation (RBFF) was found most efficient followed by maize based fungal formulation (MBFF) while performance of wheat based fungal formulation (WBFF) was found to be the poorest. These formulations could be stored for 3 months under ambient conditions and 6-12 months under controlled conditions (30°C). Overall, the results demonstrated the applicability of *A. lentulus* for effluent treatment using simple, low cost alternative media in both growing and nongrowing modes, thus developing a simple biological system (providing synergistic contribution by native microbes & fungal isolate) for Cr (VI) detoxification under ambient pH conditions in small scale industrial units located especially in remote rural or semi urban sector.

4.5.1 Biosorption rate.....	117
4.5.2 FTIR results.....	122
4.5.3 Effect of pH.....	125
4.5.4 Effect of Cr (VI) concentration	128

4.5.5 Effect of fungal culture age.....	132
4.5.6 Adsorption isotherms	134
4.5.7 Adsorption kinetics	135

CHAPTER 5: ALTERNATIVE MEDIA AND FUNGAL FORMULATIONS FOR FIELD APPLICATION..... 142

5.1 Alternative media for fungal growth..... 142

5.1.1 Selection of plants for use as a source of alternative media.....	142
5.1.2 Characterization of seeds/pods of selected plants	143
5.1.3 Use of alternative media as growth medium for <i>A. lentulus</i>	146
(a) Growth of <i>A. lentulus</i> using WELP/WESS supplemented with glucose and yeast extract in absence of Cr (VI)	146
(b) Growth of <i>A. lentulus</i> using alternative media alone (WELP+WESS) in absence of Cr (VI).....	148
(c) Growth of <i>A. lentulus</i> on solidified alternative media	149
5.1.4 Effect of Cr (VI) on the growth of <i>A. lentulus</i> using plant based media.....	154
(a) Growth of <i>A. lentulus</i> using WELP/WESS supplemented with glucose and yeast extract in presence of Cr (VI).....	154
(b) Growth of <i>A. lentulus</i> using alternative media alone (WELP+WESS) in presence of Cr (VI).....	155
5.1.5 Cr (VI) removal using alternative media.....	158
(a) Using growing biomass	158
(b) Using pre-cultivated biomass	160
5.1.6 Cost benefit analysis - preliminary investigations	161

5.2 Fungal formulation for field application..... 164

5.2.1 Selection of organic bases for fungal formulation	164
5.2.2 Characterization of organic bases for formulation	165
5.2.3 Shelf life of fungal formulations	166
(a) Formulation stored at 30°C	167
(b) Formulation stored at 4°C	168
(c) Formulation stored under ambient conditions	170
5.2.4 Efficacy of fungal formulations for Cr (VI) removal.....	171

CHAPTER 6: REMOVAL OF CR (VI) FROM INDUSTRIAL EFFLUENT 175

6.1 Characterization of effluents..... 175

6.2 Experiments with CETP effluent..... 177

6.2.1 Using growing biomass.....	177
(a) Neat Effluent.....	177
(b) Dilution and nutrient supplementation of effluent	177
(c) Supplementation only	179
(d) Role of native microbes (present in actual effluent) in Cr (VI) removal	180
(e) Cr (VI) removal from actual effluent using alternative media	184

6.2.2 Using pre-cultivated fungal biomass	185
6.3 Experiments with electroplating effluent.....	187
6.3.1 Using growing biomass.....	187
6.3.2 Using pre-cultivated fungal biomass.....	188
<u>CHAPTER 7: SUMMARY AND CONCLUSIONS.....</u>	193
• Identification of the nutritional requirements for <i>A. lentulus</i>	193
• Cr (VI) removal by <i>A. lentulus</i> in growing mode and mechanism involved	194
• Biosorption of Cr (VI) by <i>A. lentulus</i> in non-growing mode	196
• Development of alternative medium for <i>A. lentulus</i> growth.....	197
• Cr (VI) removal from industrial effluent.....	199
• Development and evaluation of fungal formulation	201
Conclusions and future prospects.....	202
