ACKNOWLEDGEMENTS

The author is highly grateful to Professor P.V. Indiresan, Head of the Electrical Engineering Department, I.I.T., Delhi, for his constant encouragement and helpful guidance without which this work would not have been possible.

The author is thankful to his brother and colleague Subhash C. Kak for proof-reading the manuscript.

Thanks are due to Dev Raj Joshi of the Mathematics Department, I.I.T., Delhi for expert typing of the manuscript.

TABLE OF CONTENTS

	Page
1. INTRODUCTION	
1.1	1
1.2 Assumptions	3
1.3 Summary of the Investigation	4
1.4 Summary of the Chapter "Miscellaneous"	7
2. REALIZABILITY OF UNIFORM APERTURE DISTRIBUTIONS	
2.1 Plane Wave Spectrum Representation of the Electromagnetic Fields	10
2.2 Realizability of Uniform Aperture Distributions	15
2.3 Discussion	26
3. A FUNDAMENTAL PRINCIPLE IN THE THEORY OF PLANAR ANTENNAS	
3.1 A Fundamental Principle	27
3.1.1 Analyticity of $F_y(k_y, k_x)$	28
3.1.2 An Equivalence Relationship	31
3.1.3 Statement of the Principle	33
3.2 A New Expression for the Radiated Power	34

4.	A NOVEL REPRESENTATION FOR THE RADIATED POWER OF PLANAR ANTENNAS	
4.1	Introduction	39
4.2	Introduction to Gaussian Quadrature Theory	41
4.3	A Discrete Point Representation for the Radiated Power	49
4.4	Error Estimate for the Discrete Point Representation	56
4.5	Some Computational Results	66
4.6	Applications of the Theory	70
5.	ROTATIONALLY UNSYMMETRIC APERTURES	
5.1	Introduction	75
5.2	Product Formulas for Multiple Integrals	76
5.3	A Discrete Point Representation for the Radiated Power	78
6.	MISCELLANEOUS	
6A.	NONLINEARITY OF CHARGE FLOW IN CONDUCTOR SYSTEMS	
6A.1	Introduction	90
6A.2	Assumptions	92
6A.3	Analysis	95
6A.4	Discussion and Conclusion	105

6B. ON OBTAINING ELECTRON DENSITY PROFILES OF PLANETARY IONOSPHERES	
6B.1 Introduction	108
6B.2 Analysis	109
6B.3 Discussion and Conclusion	114
6C. ASYMPTOTIC ERROR ESTIMATES FOR GAUSSIAN INTEGRATION OF FUNCTIONS OF LOW ORDER CONTINUITY	
6C.1 Introduction	115
6C.2 Analysis	116
6C.3 Conclusion	119
