

STUDIES ON PRINTING AND DYEING OF SILK

by

G. NALANKILLI

*A thesis submitted to the
Indian Institute of Technology, New Delhi
for the award of the degree of
DOCTOR OF PHILOSOPHY*

Department of Textile Technology
INDIAN INSTITUTE OF TECHNOLOGY, DELHI
JUNE 1994

CERTIFICATE

This is to certify that the thesis entitled "**Studies on Printing and Dyeing of Silk**" submitted by **Mr. G. NALANKILLI** to the Indian Institute of Technology, Delhi, for the award of degree of **Doctor of Philosophy** is a record of the bonafide research work carried out by him. He has worked under my guidance for the submission of this thesis, which to my knowledge has reached the requisite standard.

This thesis or any part thereof, has not been submitted to any other University or Institute for the award of any degree or diploma.

(R.B. Chavan)
Professor
Thesis Supervisor
Department of Textile Technology
Indian Institute of Technology

ACKNOWLEDGEMENT

I bow my head to express sincere gratitude to my Supervisor, Prof. R.B. Chavan, Department of Textile Technology, Indian Institute of Technology, Delhi, for his guidance, encouragement, invaluable help and continued interest throughout the course of this work without which it would not have been possible to develop this work into its present form.

I would like to thank Prof. (Ms.) P. Bajaj, Prof. M.L. Gulrajani for their kind help in every respect for the valuable suggestions and advice.

I am thankful to my colleagues, especially Dr. Radhakrishnan, Dr. Meenakshi Radhakrishnan, Ms. Sheetal Chopra, Ms. Deepali Agarwal, Dr. Shailja, Mr. G. Sundresan and Mr. T.R. Kannan who have contributed some form of help during the course of the study.

I am thankful to my uncle who left me free from all other worries which enabled me to concentrate wholeheartly in the study.

I wish to express my thanks to Dr. J.V. Rao, Head of the Department of Textile Technology, Anna University, for his kind advice from time to time.

I wish to record my appreciation for Mr. Rajesh K. Arora for his meticulous word-processing, supporting staff of Textile Chemistry Laboratory, Mr. K.G. Padam, who did all the tracings in an excellent manner and Mr. Didar Mal, Store Superintendent, who arranged the required materials in time.

I finally would like to thank my mother, brothers and sisters for their encouragement and wishings.

(G. NALANKILLI)

DEDICATED

TO

MY FATHER

Synopsis

CHAPTER 1 Introduction

Composition, Structure and Chemical Processing of Silk.

1.1	Introduction	1
1.2	Varieties of silk	1
1.3	Spinning of Silk	2
1.4	Composition of Silk	3
1.5	Molecular Structure of Silk Fibre	3
1.5.1	Amino Acid composition	3
1.5.2	Distribution of Amino acid sequences	4
1.5.3	The α and β forms of molecules	5
1.5.4	Intermolecular forces	5
1.6	Chemical Processing of Silk	6
1.6.1	Degumming of silk	6
1.6.2	Bleaching of silk	11
1.6.3	Dyeing of silk	15
1.6.3.1	Natural dyes	15
1.6.3.2	Acid dyes	16
1.6.3.3	Reactive dyes	18
1.6.4	Printing	24
1.6.4.1	Printing with acid dyes	25

1.6.4.2 Printing of silk with reactive dyes	27
1.6.4.3 Printing of silk with Drimarene dyes	29
1.6.4.4 Discharge printing of silk	30
1.6.5 Finishing of Silk	33
1.6.5.1 Weighting of silk	33
1.6.5.2 Scroopy handle	34
1.6.5.3 Crease recovery finishes	34
1.6.6 Present Work	35

CHAPTER 2 SUBLIMATION TRANSFER PRINTING OF SILK

2.1 Introduction	36
2.1.1 Grafting	37
2.1.2 Acylation and Grafting	39
2.1.3 Other Modifications	40
2.1.4 Yellowing of Silk	42
2.2 Materials	43
2.3 Experimental Methods	44
2.3.1 Bleaching	44
2.3.2 Printing of paper	44
2.3.3 Synthesis of resin	45
2.3.4 Pretreatment and transfer printing	45
2.3.5 Estimation of dye transfer	45
2.3.6 Colour strength	46
2.3.7 Wash fastness and dry cleaning fastness	46
2.3.8 Physical properties	47

2.4	Results and Discussion	47
2.4.1	Effect of resin concentration on dye transfer	47
2.4.2	Dye-fibre-resin interaction	48
2.4.3	Finishing of silk	48
2.4.4	Weighting of silk	50
2.5	Conclusions	51

CHAPTER 3 FIXATION OF REACTIVE PRINTS ON SILK BY SODIUM SILICATE PAD-BATCH TECHNIQUE

3.1	Introduction	52
3.2	Materials	54
3.3	Experimental Methods	55
3.3.1	Bleaching	55
3.3.2	Sodium alginate thickening	56
3.3.3	Printing	56
3.3.4	Padding and batching	57
3.3.5	Aftertreatments	57
3.3.6	Determination of dye fixed on the fabric	57
3.3.7	Determination of dye fibre reaction	58
3.3.8	Wash fastness and light fastness of prints	58
3.3.9	Characterisation of sodium silicate	59
3.2.10	Tensile strength	59
3.4	Results and Discussion	60
3.4.1	Effect of batching time on fixation (%)	60
3.4.2	Fixation ratio (%)	61

3.4.3	Fastness Properties	62
3.4.4	Sodium Silicate	62
3.4.5	Effect of sodium silicate on tensile strength	62
3.4.6	Fixation by different methods	63
3.4.7	Fixation ratio	63
3.4.8	Fastness properties of prints fixed by different methods	64
3.4.9	Tensile strength	64
3.5	Conclusions	64

CHAPTER 4 OBSERVATIONS ON THE ESTIMATION OF AMINO GROUPS IN SILK USING NINHYDRIN REACTION

4.1	Introduction	66
4.2	Materials	68
4.3	Experimental Methods	69
4.3.1	Preparation of ninhydrin solution	69
4.3.2	Preparation of glycine standard solution	69
4.3.3	Silk-ninhydrin reaction	69
4.3.4	Glycine-ninhydrin reaction	70
4.3.5	Determination of amino groups in silk	70
4.4	Results and Discussion	71
4.4.1	Effect of reaction time on purple colour development	71
4.4.2	Effect of reaction time and temperature on absorbance of blank solution	72

4.4.3 Effect of storage time on degradation of purple colour	72
4.4.4 Effect of reaction time on the determination of amino groups in silk	72
4.4.5 Successive treatments of silk with ninhydrin	73
4.4.6 Effect of quantity of ninhydrin solution on the estimation of amino groups in silk	73
4.5 Conclusions	75

CHAPTER 5 FIXATION OF REACTIVE PRINTS ON SILK BY SODIUM SILICATE PAD-BATCH TECHNIQUE - REACTION MECHANISM

5.1 Introduction	76
5.2 Materials	77
5.3 Experimental Methods	77
5.3.1 Determination of Tyrosine content of silk	77
5.3.2 Determination of amino groups in silk	78
5.3.3 Deamination of silk	78
5.3.4 Oxidation of silk	78
5.3.5 Oxidation and deamination of silk	79
5.3.6 Printing	79
5.3.7 Fixation of prints	80
5.3.8 Extraction of unfixed dye from the printed samples	80
5.3.9 Fixation and fixation ratio of prints	80
5.4 Results and Discussion	81
5.4.1 Deamination and oxidation of silk	81

5.4.2 Amino groups and tyrosine content	82
5.4.3 Fixation and fixation ratio of prints fixed by steaming	83
5.4.4 Effect of pH of the print paste on dye transfer	83
5.4.5 Fixation and fixation ratio of prints fixed by sodium silicate pad-batch technique	83
5.4.6 Determination of amino groups and tyrosine content of printed silk	84
5.5 Conclusions	85

CHAPTER 6 DYEING OF SILK WITH REMAZOL GOLDEN YELLOW (C.I. REACTIVE YELLOW 17) - REACTION MECHANISM

6.1 Introduction	86
6.2 Materials	87
6.3 Experimental Methods	88
6.3.1 Determination of tyrosine content of silk	88
6.3.2 Determination of amino groups content of silk	88
6.3.3 Dyeing	88
6.3.4 Extraction of unfixed dye from the dyed samples	89
6.3.5 Exhaustion and fixation ratio of the dyed samples	90
6.3.6 General	90
6.4 Results and Discussion	91
6.4.1 Amino groups and tyrosine content	91
6.4.2 Fixation ratio and exhaustion of dye	91

6.4.3	Involvement of amino and tyrosine content under different pH level	92
6.4.4	Effect of dyeing time on exhaustion and fixation ratio of reactive dye on control silk	94
6.5	Conclusions	94
CHAPTER 7 ADSORPTION ISOTHERM OF ACID AND REACTIVE DYES ON SILK		
7.1	Introduction	96
7.2	Materials	99
7.3	Experimental methods	100
7.3.1	Purification of dyes	100
7.3.2	Determination amino groups	100
7.3.3	Deamination of silk	100
7.3.4	Blank Dyeing	100
7.3.5	Dyeing	100
7.3.6	Estimation of dye	101
7.4	Results and Discussion	101
7.4.1	Rate of dyeing	101
7.4.2	Adsorption isotherms	101
7.4.3	Saturation value Vs. Amino groups	102
7.4.4	Langmuir Adsorption	105
7.5	Conclusions	107
