

**PULSE PROPAGATION THROUGH A MEDIUM
OF TWO LEVEL ATOMS**

by
DILIP RANGANATHAN

Thesis submitted to Indian Institute of Technology,
Delhi, for the award of the degree of Doctor of Philosophy

Department of Physics
Indian Institute of Technology, Delhi
July, 1975

ACKNOWLEDGEMENTS

I wish to thank Professor C.L. Mehta for his help and guidance. I also wish to thank Dr. G.P. Agrawal, Dr. Balasubramaniam Rao and Messrs M.K. Sharma and A. Sudhakar Rao for many technical discussions.

For their friendship and assistance in all the many acts that are concomitant and necessary for research, I wish to thank those mentioned above as well as Messrs. G. Bose, P. Sudhakar, Miss Kamma Aggarwal as well as Drs. Sushma Trivedi and C.S. Vikram. But for these people and many others, the task would have been far harder and infinitely less pleasant.

The actual physical task of getting the thesis ready for submission was done by Mr. Ram Gopal Gupta and Dr. B. Rao. To them to Mr. D.R. Joshi who typed a confusing manuscript carefully, I wish to give my thanks.

Financial support of the C.S.I.R. India which enabled me to complete this work is acknowledged. Finally, to my parents who will not mind being mentioned last, I wish to acknowledge the forbearance they have displayed to all my eccentricities.

CONTENTS

I	BASIC DYNAMICAL EQUATIONS	
	1.1 Introduction	1
	1.2 Derivation of the Bloch Equations	5
	1.3 Derivation of the Dynamical Equation for the Electric Field	17
	Appendix A: Derivation of Eq.(1.53)	24
	References	29
II	RESONANT PULSE PROPAGATION	
	2.1 Introduction	33
	2.2 Solutions of the Dynamical Equation (2.2) in One Dimension	34
	2.3 Solutions of the Problem in Three Dimensions	45
	2.4 Effects of a finite Relaxation Time	54
	2.5 Effects of atomic line broadening	57
	References	61
III	NON RESONANT PULSE PROPAGATION	
	3.1 Introduction	62
	3.2 Self Action Effects	64
	3.3 Frequency Shifted Processes	67
	References	80
IV	QUANTUM MECHANICAL CONSIDERATIONS FOR PULSE PROPAGATION	
	4.1 Introduction	83
	4.2 Diagonalising the Dicke Hamiltonian	86
	4.3 Dynamics of the Electric Field	92
	4.4 Evaluation of $G(\mathbf{r}-\mathbf{r}', t)$ occurring in Eq. (4.31) in One Dimension	96
	4.5 Evaluation of the Kernel (4.28) in Three Dimensions	99
	References	102

V	PROPAGATION IN A BOUNDED MEDIUM	
	5.1 Introduction	103
	5.2 Pulse Propagation Through a Circular Tube	104
	5.3 Propagation Between a Pair of Plane Parallel Electrodes	111
	References	114
