

MODULATION TRANSFER FUNCTION STUDIES AND THEIR APPLICATIONS TO OPTICAL SYSTEMS

KAMAL NAIN CHOPRA

THESIS SUBMITTED TO THE INDIAN INSTITUTE OF TECHNOLOGY, DELHI
IN PARTIAL FULFILMENT OF THE DEGREE OF
DOCTOR OF PHILOSOPHY

1973

ACKNOWLEDGEMENTS

I wish to express my deep sense of gratitude to Professor P.K. Katti for providing me an opportunity to work under his guidance and taking pains to help me throughout the course of investigations. My most sincere thanks are due to Shri K. Singh for his affectionate guidance, stimulating discussions and useful suggestions at the various stages of the work, but for which, it would have not been possible for me to present the thesis in the present form.

I am also thankful to Professor M.S. Sodha whose affection and keen interest in the work have always been a source of encouragement for me. Thanks are also due to Professor C.L. Mehta for useful discussions and interest in the work. I am highly grateful to Professor M. De of Calcutta University for helpful discussions at various stages of the work.

I also wish to record my thanks to Shri G.S. Bhatnagar and Shri J.N. Maggo for many useful discussions and their help in completing a part of the work. I am thankful to Dr. P.N. Gupta and Shri D. Ranganathan for going through the manuscript. I am also thankful to Dr. C.S. Vikram and

Shri R.K. Aggarwal for their cooperation in the compilation of the work.

Thanks are due to Shri A.K. Kalra of I.R.D.E. Dehra Dun for neatly drawing the figures and to Shri Narendra Kumar of N.P.L. New Delhi for making the xerographs of the figures available. Thanks are also due to Shri V.N. Sharma for efficient typing of the thesis.

This work was partially supported by the Council of Scientific and Industrial Research, India.

(KAMAL NAIN CHOPRA)

CONTENTS

	Page
PREFACE	... (i)
CHAPTER I INTRODUCTION AND BASIC PRINCIPLES OF FOURIER OPTICS	... 1
1.1. Introduction	... 1
1.2. Basic Principles of Fourier Optics	... 4
1.2.1. Point and Line Spread Functions	... 4
1.2.2. Image of a Point Source and Fourier Transform	... 6
1.2.3. Image of an Incoherent Extended Object	... 10
1.2.4. Optical Transfer Function	... 13
References	... 15
CHAPTER II CHARACTERISTICS AND EVALUATION OF OPTICAL TRANSFER FUNCTION	... 18
2.1. Dependence of OTF on the Spread Function	... 18
2.2. Dependence of OTF on the Pupil Function	... 22
2.3. OTF and Filtering of Spatial Frequencies	... 25
2.4. Difficulties in the use of Sine-Wave Objects	 27

	Page
2.5. Objects with Rectangular Transmission Profile	... 27
2.6. Objects with Triangular Transmission Profile	... 29
2.7. Further Investigations	... 31
References	... 32
CHAPTER III GENERAL PROPERTIES OF OPTICAL SYSTEMS	... 34
3.1. Introduction	... 34
3.2. Brief Review of the Studies of Amplitude Filters and Aberrations	... 36
3.2.1. Amplitude Filters	... 36
3.2.2. Aberrations	... 39
3.3. Theory	... 40
3.3.1. Intensity Distribution in the Image	... 40
3.3.2. General Periodic Rectangular Wave Object	... 41
3.3.3. General Periodic Triangular Wave Object	... 42
3.3.4. Object with Infinitely Thin Lines	... 43
3.3.5. Contrast in the Images of Rectangular and Triangular Wave Objects	... 44

	Page
3.4. Modulation Transfer Functions	44
3.4.1. Amplitude Filters	44
3.4.2. Aberrations	49
(a) Defocused Slit	49
(b) Defocused Rotation Symmetrical Optical System	50
(c) Circular Aperture in the presence of Optimum Balanced Fifth Order Spherical Aberration	51
3.5. Results and Discussion	52
3.5.1. Diffraction Limited Optical Systems	52
3.5.2. Amplitude Filters	56
(a) Optical Systems with Pupil Function of the form $T(s) =$ $a's^2 + 1 - (a'/2)$	58
(b) Optical Systems with Pupil Function of the form $T(u,v) =$ $1 - \beta(u^2 + v^2)$	63
3.5.3. Aberrated Systems	65
(a) Defocused Systems	65
(b) Optical Systems in the presence of Optimum Balanced Fifth Order Spherical Aberration	68

	Page
3.6. Concluding Remarks	70
References	71
CHAPTER IV DEGRADATION OF THE IMAGES BY INTERVENING MEDIA	77
4.1. Introduction	77
4.2. Brief Review of Previous Work	78
4.2.1. Vibrations	78
4.2.2. Atmospheric Turbulence	78
4.2.3. Sea Water	82
4.3. Modulation Transfer Functions	82
4.3.1. Vibrations	82
(a) Slit and Circular Apertures in the presence of Transverse Vibrations	82
(b) Circular Aperture in the presence of Longitudinal Vibrations	83
4.3.2. Atmospheric Turbulence	85
(a) Slit Aperture in the presence of Sinusoidal Amplitude Disturbance.	85
(b) Slit Aperture in the presence of Sinusoidal Phase Disturbance	85
4.3.3. Sea Water	86

	Page
4.4. Results and Discussion	... 88
4.4.1. Optical Systems operating in the presence of Vibrations	... 88
(a) Transverse Vibrations	... 88
(b) Longitudinal Vibrations	... 90
4.4.2. Optical Systems operating in a Turbulent Medium	... 92
4.4.3. Sea Water	... 97
References	... 99
 CHAPTER V PERFORMANCE ANALYSIS OF SOME IMPORTANT RECEPTOR SYSTEMS	 ... 104
5.1. Introduction	... 104
A. Photographic Emulsions	... 105
5.2. Brief Review of Previous Work	... 105
5.3. Theory	... 107
5.3.1. Modulation Transfer Functions	... 108
(a) Photographic Emulsion	... 108
(b) Photographic Emulsion- Developer System	... 109
5.4. Results and Discussion	... 114
5.5. Concluding Remarks	... 116

	Page
B. Image Orthicons	... 117
5.6. Brief Review of Previous Work	... 117
5.7. Theory	... 121
5.7.1. Line Transmittance	... 122
5.7.2. Sine Wave Response	... 123
5.8. Results and Discussion	... 124
5.9. Concluding Remarks	... 126
C. Photodiodes and Phototransistors	... 127
5.10. Brief Review of Previous Work	... 127
5.11. Theory	... 128
5.12. Results and Discussion	... 130
Appendix	... 131
References	... 133

CHAPTER VI EVALUATION OF THE PERFORMANCE ANALYSIS OF A POLARIZING MICROSCOPE WITH CROSSED POLARIZERS	... 139
6.1. Introduction	... 139
6.2. Brief Review of Previous Work	... 140
6.3. Theory	... 142
6.3.1. Diffraction Image	... 142
6.3.2. Modulation Transfer Function	... 147
6.4. Results and Discussion	... 150
References	... 153

	Page
CHAPTER VII DIFFRACTION IMAGES OF TRUNCATED PERIODIC OBJECTS FORMED BY APODIZED SYSTEMS	... 155
7.1. Introduction	... 155
7.2. Theory	... 157
7.3. Results and Discussion	... 164
7.3.1. Slit with Pupil Function of the form $T(s)=a's^2 + (1-a'/2)$	... 164
7.3.2. Circular Aperture with Pupil Function of the form $T(u,v)=$ $1-\beta(u^2+v^2)$	... 166
References	... 171
CHAPTER VIII A METHOD OF REDUCING THE FLUCTUATIONS OF INTENSITY AT THE FOCUS OF A CIRCULAR APERTURE	... 173
8.2. Theory	... 174
8.3. Results and Discussion	... 177
