

**INVESTIGATION OF COSOLVENT-MODIFIED
IONIC LIQUID MIXTURES**

BY

SHRUTI TRIVEDI

DEPARTMENT OF CHEMISTRY

SUBMITTED

IN FULFILLMENT OF THE REQUIREMENTS OF THE DEGREE OF

DOCTOR OF PHILOSOPHY

TO THE

INDIAN INSTITUTE OF TECHNOLOGY DELHI

FEBRUARY 2012

CERTIFICATE

This is to certify that the thesis entitled, “Investigation of Cosolvent-Modified Ionic Liquid Mixtures”, being submitted by Ms. Shruti Trivedi to the Indian Institute of Technology Delhi for the award of the degree of Doctor of Philosophy in Chemistry is a record of bonafide research work carried out by her. She has worked under my guidance and supervision and has fulfilled the requirements for the submission of this thesis, which to my knowledge has reached the requisite standard.

The results contained in this dissertation have not been submitted in part or full to any other University or Institute for the award of any degree or diploma.

Prof. Siddharth Pandey

Department of Chemistry

Indian Institute of Technology Delhi

ACKNOWLEDGEMENTS

It gives me immense pleasure and admiration to thank my advisor Prof. Siddharth Pandey, Department of Chemistry, IIT Delhi, for his unflinching support, patience, motivation, enthusiasm, and immense knowledge. His perfect scientific opinion enabled me to develop an understanding of the subject. His perpetual energy and enthusiasm in research has always motivated his students. In addition, he was always accessible and willing to help his students with their research. As a result, research life became more exciting and rewarding for me. As an advisor, he has always encouraged me to realize my potential and helped me to develop new ideas to pursue my research work.

I would like to express my sincere thanks and gratitude to Dr. Gary A. Baker and Dr. Sheila N. Baker, Department of Chemistry and Department of Chemical Engineering, respectively, University of Missouri, Columbia, United States, for providing me necessary inputs related to my research work.

I would like to thank Dr. Shashank Deep, Associate Professor at Department of Chemistry, IIT Delhi for his assistance in providing necessary instrumentation for my research work.

I gratefully acknowledge Dr. Shubha Pandey for providing unconditional help, support, and encouragement throughout my research work. Collective and individual acknowledgments are owed to my colleagues Parmila Dahiya, Mrituanjay D. Pandey, Sambhav Vora, Arti Gupta, Naved I. Malek, Abhra Sarkar, Kamlakanta Behera, Pallavi

Singh, Vinod Kumar, Rewa Rai, Poulami Dutta, Hari Om, Robin Paul, Chhavi Bhanot, and Ambika Bhagi whose cooperation and support would always be memorable .

I would also like to thank all the past and present Heads of the Department, DRC Chairpersons, SRC members, and all the faculty and staff members of the Department of Chemistry for providing help, support and suggestions during my research work.

I extend my sincere thanks to University Grants Commission (UGC), India for financial assistance, and IIT Delhi for providing me other necessary facilities during my research career.

The forbearance and fortitude which my husband, Vivek Gupta, showed me during my research career cannot be described in words and it really encouraged me. I convey special acknowledgement to him, whose dedication, love and persistent faith in me, helped me to reach my destination.

I greatly appreciate the love, patience and encouragement received from my parents and in-laws. This journey would have been rather impossible without all of them.

It gives me immense pleasure to thank my friends Sanyucta Singh, Deeksha Gupta, Deepika Khandelwal, Unnati Ahluwalia, Pratibha Agarwal, Aditi Gupta, Hiral Shah, Ritika Gautam, Aastha Dua, and Tanya Raghuwanshi whose support, love and affection are always with me. Finally, I would like to thank the almighty God for providing me strength and courage to face the challenges laid out before me.

Shruti Trivedi

ABSTRACT

The unique and fascinating properties of ionic liquids (ILs) coupled to their extensive applications in various industries and academia render them substances of utmost significance. However, limited solubilization ability, limited physicochemical properties, high viscosity, and high cost associated with most ILs restrict their overall use. In this context, IL-based multicomponent systems may afford better tuned physicochemical properties and hence increase the overall effectiveness of ILs.

The thesis entitled ‘Investigation of Cosolvent-Modified Ionic Liquid Mixtures’ is concerned with the understanding of the interactions within cosolvent-modified IL-based systems. The thesis features detailed investigation of judiciously selected cosolvent-added IL systems utilizing various optical spectroscopic techniques along with bulk property and microproperty measurements. The experimental observations are used to assess the interactions within several multicomponent IL-based systems.

The thesis has been divided into seven chapters. Chapter 1 (Background and Introduction) provides a concise introduction to ILs and the problems that this particular research work is based on along with the approaches adopted to answer them. It also describes long- as well as short-term aims of the investigation. Chapter 2 titled ‘Materials and Methodologies’ is about chemical procurement, purification and storage as well as techniques used during the investigation. Specifically, uv-vis molecular absorbance, molecular fluorescence, excited-state fluorescence intensity decay, FTIR absorbance, and density and viscosity measurements are used to acquire the requisite information. Chapter 3 titled ‘Multiprobe Spectroscopic Investigation of (Ionic Liquid + 2,2,2-Trifluoroethanol

(TFE)) and (Ionic Liquid + Propylene Carbonate (PC)) Mixtures' provide details of the solvatochromic probe behavior within (1-butyl-3-methylimidazolium hexafluorophosphate ([bmim][PF₆]) + cosolvent) mixtures with TFE and PC, respectively. Mixtures of [bmim][PF₆] with TFE show rare 'synergistic solvent effect' or 'hyperpolarity' effect which are discussed in terms of coulombic interactions, disruption of TFE multimers, formation of hyper anion preference aggregates, and "free" [bmim]⁺. In ([bmim][PF₆] + PC) mixtures, spectral behavior of collective probes hint at solute-specific preferential solvation and negligible specific solvent-solvent interaction(s). Chapter 4 titled 'Temperature-Dependent Solvatochromic Probe Behavior within Ionic Liquids and (Ionic Liquid + Water) Mixtures' deals with spectroscopic behavior of absorbance probes and fluorescence dipolarity probes within ILs [bmim][PF₆] and 1-butyl-3-methylimidazolium tetrafluoroborate ([bmim][BF₄]), and aqueous mixtures of [bmim][BF₄] as a function of temperature to assess the changes in the physicochemical properties of these interesting systems in the temperature range 10-90 °C. Chapter 5 titled 'Density, Dynamic Viscosity and Probe-Reported Microviscosity of [Ionic Liquid + Poly(Ethylene Glycol) (PEG)] Mixtures and their Temperature Dependence' lays out the details of the bulk property (density and dynamic viscosity) and microproperty (microviscosity) measurements of ([bmim][PF₆] + PEG) mixtures with PEG average molecular weight 200 (PEG200), 400 (PEG400), 600 (PEG600), and 1000 (PEG1000) at different temperatures to assess interactions within these 'hybrid green' systems. Mixtures of ([bmim][PF₆] + PEG1000) and ([bmim][PF₆] + PEG600) show rare 'viscosity synergism' or 'hyperviscosity' which is attributed to the formation of extensive H-bonding between bmim⁺ and terminal -OH of PEG600/PEG1000 that more than

compensates for the losses in coulombic attractive interactions and van der Waals interactions within [bmim][PF₆] and PEG600/PEG1000, respectively. Chapter 6 titled 'Fluorescence Quenching of Polycyclic Aromatic Hydrocarbons by Nitromethane within Ionic Liquid - Added Aqueous Anionic Micellar Solution' explores the applicability of nitromethane as a selective fluorescence quenching agent for discriminating between alternant *versus* nonalternant polycyclic aromatic hydrocarbons (PAHs) within aqueous anionic micellar sodium dodecyl sulfate (SDS) solution in the presence of IL [bmim][BF₄]. Interestingly, in the presence of small amounts of [bmim][BF₄], nitromethane started to selectively quench the fluorescence emission from alternant PAHs even in SDS micellar media. Screening of anionic micellar surface by bmim⁺ helps nitromethane retain its selective quenching at lower IL concentrations. Chapter 7 titled 'Conclusions and Future Perspectives' highlights the salient features of the overall study. In short, it is concluded that addition of a cosolvent to IL can result in significant modification/alteration of physicochemical properties; even remarkable and unanticipated properties can be observed with appropriate combination of the components. Thus, IL-based multicomponent systems may afford media with favorably altered physicochemical properties thus increasing the overall utility of these interesting substances.

Abstract	V
Contents	IX
List of Figures	XV
List of Tables	XXI
List of Abbreviations	XXIII
Chapter 1: Introduction and Background	
1. Introduction	3
1.A. Ionic Liquids and their historical perspectives	6
1.B. What good are ionic liquids?	10
1.C. Synthesis and structural features of ILs	11
1.D. Physical and chemical properties of ILs	13
1.E. Applications of ionic liquids	17
1.E.1. Extractions and separations in analytical chemistry	17
1.E.2. An unconventional medium for analysis	23
1.E.3. Solvents for synthesis and catalysis	27
1.F. Origin of the problem and its solution	28
1.F.1. Properties and applications of cosolvents chosen	30

1.G. Objective	33
1.G.1. Specific objective	34
1.H. Significance of the thesis in the perspective of present status	34
1.I. References	36
Chapter 2: Materials and Methodologies	
2. Introduction	53
2.A. Instrumentation	54
2.B. Materials	55
2.B.1. Ionic liquids, cosolvents, and surfactant used	55
2.B.2. Solvatochromic dyes, fluorophores, polycyclic aromatic hydrocarbons, and quenching agent	57
2.B.3. Short descriptions of the probes	58
2.B.3.1. uv-vis molecular absorbance probes	58
2.B.3.2. Fluorescence probes	63
2.B.3.3. Polycyclic aromatic hydrocarbons	68
2.C. Sample preparation	72
2.D. Data acquisition	73
2.E. Data treatment and analysis	73
2.F. Interactions within neat and cosolvent-modified ionic liquids revealed by solvatochromic probe behavior	74
2.F.1. Preferential solvation	74

2.G. Some relevant terminologies	75
2.G.1. Solvatochromism & solvatochromic probes	75
2.G.2. Positive and negative solvatochromic probes	76
2.G.3. Solvation	77
2.G.4. Cybotactic region	77
2.G.5. Solvent polarity	77
2.G.6. Kamlet-Taft parameters	78
2.H. References	80

Chapter 3: Multiprobe Spectroscopic Investigation of (Ionic Liquid + 2,2,2-Trifluoroethanol) and (Ionic Liquid + Propylene Carbonate) Mixtures

3. Introduction	89
3.A. [bmim][PF ₆] + 2,2,2-Trifluoroethanol	92
3.A.1. Behavior of Reichardt's dye 30 in [bmim][PF ₆] + TFE mixtures	92
3.A.2. Kamlet-Taft parameters for [bmim][PF ₆] + TFE mixtures	95
3.A.3. Betaine dye response in TFE mixtures with other ILs	97
3.A.4. Behavior of fluorescence probes within [bmim][PF ₆] + TFE mixtures	100
3.A.5. Modeling probe responses using Redlich-Kister polynomials	103
3.A.6. FTIR spectroscopy of [bmim][PF ₆] + TFE mixtures	105
3.A.7. Dynamic viscosity and density measurements of [bmim][PF ₆] + TFE mixtures	109

3.B. [bmim][PF ₆] + Propylene Carbonate	110
3.B.1. Behavior of Reichardt's dye and E_T^N values	110
3.B.2. Empirical Kamlet-Taft parameters	111
3.B.3. Preferential solvation or solvent-solvent interaction?	114
3.B.4. Behavior of fluorescence probes within [bmim][PF ₆] + PC mixtures	116
3.B.5. FTIR absorbance spectroscopy	118
3.B.6. Solvatochromic parameters and Redlich-Kister model	119
3.C. Conclusions	124
3.D. References	126

Chapter 4: Temperature-Dependent Solvatochromic Probe Behavior within Ionic Liquids and (Ionic Liquid + Water) Mixtures

4. Introduction	137
4.A. Temperature-dependent probe behavior within neat ionic liquids	139
4.A.1. Behavior of 2,6-dichloro-4-(2,4,6-triphenyl-N-pyridino) phenolate and $E_T(33)$	139
4.A.2. Empirical Kamlet-Taft parameters	142
4.A.3. Behavior of fluorescence dipolarity probes	146
4.B. Temperature-dependent probe behavior within aqueous [bmim][BF ₄]	149
4.C. Conclusions	158
4.D. References	159

Chapter 5: Density, Dynamic Viscosity and Probe-Reported Microviscosity of [Ionic Liquid + Poly(Ethylene Glycol)] Mixtures and their Temperature Dependence

5. Introduction	169
5.A. Densities of ([bmim][PF ₆] + PEG) mixtures	173
5.A.1. Excess molar volume	177
5.B. Bulk dynamic viscosities of ([bmim][PF ₆] + PEG) mixtures	182
5.B.1. Temperature dependence of dynamic viscosity of ([bmim][PF ₆] + PEG) mixtures	182
5.B.2. Composition dependence of dynamic viscosity of ([bmim][PF ₆] + PEG) mixtures	187
5.B.3. Excess logarithmic viscosity and Redlich-Kister treatment	189
5.B.4. Reasons for ‘synergistic’ dynamic viscosity and trends in $(\ln \eta)^E$	193
5.B.5. Extensive H-bonding evidenced by FTIR absorbance spectra	196
5.C. Microviscosity of ([bmim][PF ₆] + PEG) mixtures from 1,3- <i>bis</i> -(1-pyrenyl)propane fluorescence	199
5.D. Conclusions	206
5.E. References	209

Chapter 6: Fluorescence Quenching of Polycyclic Aromatic Hydrocarbons by Nitromethane within Ionic Liquid - Added Aqueous Anionic Micellar Solution

6. Introduction	221
6.A. Fluorescence quenching of PAH and its mechanism	225
6.B. Quenching behavior of alternant PAHs	227
6.C. Quenching behavior of non-alternant PAHs	233
6.D. Conclusions	239
6.E. References	240
