

MÖSSBAUER STUDIES IN THIN FILMS AND  
AMORPHOUS MATERIALS

by

Kamna Aggarwal  
Physics Department

submitted

in fulfilment of the requirements of the degree of  
DOCTOR OF PHILOSOPHY

to the

Indian Institute of Technology, Delhi

October, 1976

### ACKNOWLEDGEMENT

Words suddenly seem inadequate when I try to express my gratitude for all the help and encouragement that I have been given at all stages of the work.

First and foremost I would like to thank Dr. R.G.Mendiratta who has always been very kind, considerate and encouraging. I would like to thank Prof. S.K.Garg whose interest in the work has been a source of inspiration. Prof. K.L.Chopra and his group are thanked for providing their expert comments and technical knowhow, whenever needed.

I do not know how to thank Dilip Ranganathan, P.Sudhakar, Rita Jain, Noreen Naqvi and Parvez N.Guzdar who provided the sustaining force and made the work more meaningful and worthwhile. The encouraging interest of G.Bose, Santosh Jogi, K.S.K.Sai, Anil Kumar and Jyoti Kamal has always been a great help.

I want to thank all my colleagues especially Dr. R.G.Gupta and Dr. R. Kamal who assisted me in every way whenever I needed assistance. The help of Hanumant Rao, Sanjiv Kumar and Sarita Ahuja in compilation of the thesis is gratefully acknowledged.

I would like to thank Mr. T.N.Gupta specially, for performing the miraculous task of typing an absolutely unmanageable manuscript. Mr. N.S.Gupta is thanked for doing such an excellent job of the drawings.

I will not even try to thank my parents and my brothers who made it all come true.

Kamna Aggrawal

## CONTENTS

CHAPTER		Page
I	MÖSSBAUER EFFECT AS A TOOL FOR STUDY OF THIN FILMS AND AMORPHOUS MATERIALS	1
II	EXPERIMENTAL DETAILS	22
	Sample Preparation & Characterisation - Bulk	22
	Thin Films	
	Mössbauer Spectrometer	29
III	MÖSSBAUER STUDIES IN THIN FILMS OF FeTe, FeSe and FeSi <sub>2</sub>	33
	FeTe System - Introduction	33
	Results & Discussion - Bulk - FeTe	35
	Thin Films of FeTe on Amorphous Substrate	46
	Aging Effects	63
	Substrate Influence	64
	FeSi <sub>2</sub> System - Introduction	66
	Results & Discussion - Bulk	67
	Thin Films	69
	FeSe System - Introduction	71
	Results and Discussion - Bulk	73
	Thin Films	77

IV	MÖSSBAUER STUDIES IN SOME AMORPHOUS MATERIALS	85
	$\text{Ge}_x \text{Te}_{1-x}$ System	85
	Theoretical Considerations	87
	Calculations of Lattice Contribution to EFG in GeTe	88
	Amorphous GeTe	88
	Crystalline GeTe	90
	Calculations for Valence Contributions to EFG	91
	Discussion	97
	$\text{CdGeAs}_2$ System	98
V	SUMMARY AND RECOMMENDATIONS	105
