June, 1983

CERTIFICATE

This is to certify that the thesis entitled "Analysis of Multireactor Degradation of Solid Substrates into Acids and Methane" submitted by Amit Mishra has been prepared under our supervision in conformity with rules and regulations of the Indian Institute of Technology, Delhi. The research report and results presented therein have now been submitted for any degree in any other University.

## Acknowledgment

I express my sincere gratitude to my research supervisor Prof. Tarun K.Ghose for his inspiring, dynamic and meaningful guidance, stimulating discussion and keen interest ~~shown~~ throughout the period of this investigation. I am also grateful to my other supervisor **Dr. S.N.Mahopadhyay** for his valuable suggestions during the latter phase of the work.

I am much obliged to Prof. K.S.Gopalkrishnan, Dr. P.Ghosh and Dr. **K.B.Ramachandran** for their valuable comments, suggestions and cooperation.

I express my thanks to M/S D.Das, Gyan Prakash, B.K.Soni, **S.N.Srivastava**, ~~S.N.Srivastava~~ **Ballu Bhattacharyya**, **Miss Mcera Nanda**, Mrs. Maitreyee Banerjee and other friends for **their** sincere support and appreciation during the progress of **the** work.

I am thankful to M/S T.K.Basu, **B.Chatterjee**, K.K.Sahu and **Bhattacharya** for their help in computer analysis.

M/S ~~S.Ken~~ Ray, V.K.Ghosh, Shiv Singh also deserve my appreciation for their skillful technical help. Assistance received from the technicians M/S **Kasham Prasad**, **J.A.Khan** and **Nasood Ali** is also acknowledged.

Finally I sincerely thank Mr. R.N.Shukla for typing the manuscript neatly.

*Amit Bhadra.*

## List of Tables

1. Distribution of solid components in different reactors
2. Gas composition and yields in different digesters
3. Distribution of carbon in gaseous products
4. Comparison between multireactor and batch data
5. Performance of anaerobic digesters using cellulose wastes
6. Effect of acetic acid addition ( $1 \text{ g.l}^{-1}$ ) in different reactors on acid production
7. Effect of acetic acid injection in reactor IV on cellulose conversion and on acid load on cells
8. Effect of acetic acid addition in the methane phase digester
9. Dissimilation and assimilation of acetic acid in the methane phase digester
10. Substrate and cell mass concentration using different initial substrate (cellulose) concentration
11. Acid composition in different reactors using different initial substrate (cellulose) concentration
12. Product yield and specific growth rate in different reactors
13. Yield factors in different reactors
14. Effect of addition of acetic acid on xylose conversion with different initial xylose concentration at  $\text{pH} = 6$  (controlled)
15. Effect of initial xylose concentration on growth yield and product yield

16. Substrate (acetic acid) and cell mass concentration in methanogenesis
17. Gas production and composition in each reactor
18. Carbon balance in methanogenesis
19. Carbon distribution in each reactor in methanogenesis
20.  $\text{CO}_2$  - correction in gas composition
21. Yield factors and  $\mu$  in different reactors
22. Values of rate constants in Mechanism 1 when step (1) controls
23. Comparison between theoretical and experimental rates with  $\text{CR} = 3.15 \text{ g.l}^{-1}$
24. Acetic acid concentration with different feed substrate concentration
25. Comparison of theoretical and experimental rates with initial substrate concentration of  $7 \text{ g.l}^{-1}$
26. Percent conversion of acetic acid in relation to different initial concentration
27. Energy production and requirement for acidogenesis and biomethanation with cow dung as Substrate in multireactor system
28. Comparative energy analysis between acidogenesis and biomethanation using distillery waste
29. Energy analysis of different routes for the production of 1 t of acetic acid

## List of Figures

- Fig.1 **Disparity** in energy consumption between poor and rich nations
- Fig.2 Production cycle of coal and petroleum
- Fig.3 Market of acetic acid
- Fig.4 Pathway for conversion of hexose and  $\text{CO}_2$  to acetate by Cl. thermoaceticum
- Fig.5 Pathway for the methane fermentation of Complex organics
- Fig.6 Degradation of TS, VS, cellulose and hemicellulose in multireactor system using cow dung as substrate
- Fig.7 Distribution and composition of acid production
- Fig.8 Overall **material and energy** flow of the multireactor system
- Fig.9 Acid spectrum in different reactors with different dose of acetic acid to the feed
- Fig.10 Effect of acetic acid addition to feed on total acid production
- Fig.11 Effect of acid addition to feed on acid released in different reactors
- Fig.12 Effect of acetic acid injection in reactor IV on acid production
- Fig.13 Effect of initial acetic acid **concentration** on rate of gas production in the methane phase digester
- Fig.14 Total acid concentration and acid load on cells in the acid phase
- Fig.15 Computation of true growth yield and maintenance coefficient of the acid formers
- Fig.16 Degradation of microcrystalline cellulose

- Fig.17 Rates of formation of different acids
- Fig.18 Computation of order and rate constants for the formation of different acids
- Fig.19 Selectivity at different substrate concentration
- Fig.20 Accumulation of xylose during conversion of xylan to acids in batch reactor
- Fig.21 Effect of initial substrate (xylan) concentration on acid production
- Fig.22 Acid spectrum with the progress of time with different initial substrate (xylan) concentration
- Fig.23 Effect of pH control on xylose conversion
- Fig.24 Rate of xylose conversion with different initial xylose concentration
- Fig.25 Schematic of multireactor set-up for methanogenesis
- Fig.26 Computation of true growth yield and maintenance coefficient of methanogens
- Fig.27 Pictorial depiction of Mechanism 1
- Fig.28 Computation of initial rates with different feed substrate (acetic acid) concentration
- Fig.29 Relationship between initial  $r_{max}$  and feed substrate (acetic acid) concentration
- Fig.30 Flow sheet for production of acetic acid from distillery waste
- Fig.24a Specific rate of xylose fermentation in batch process
