

Strategic Factors for Achieving Breakthrough Growth: A Study of Select Firms in Indian Context

by

R. Umamaheswari
Department of Management Studies

Submitted

in fulfillment of the requirements of the degree of Doctor of Philosophy

to the

Indian Institute of Technology, Delhi

December 2010

CERTIFICATE

This is to certify that the thesis entitled “**Strategic Factors for Achieving Breakthrough Growth: A Study of Select Firms in Indian Context**” which is being submitted by Ms. R. Umamaheswari to the Indian Institute of Technology Delhi for the award of the degree of Doctor of Philosophy (Ph.D.), is a record of bona fide original research work carried out by her. She has worked under our guidance and supervision, and has fulfilled the requirements for the submission of the thesis, which has attained standard required for a Ph.D. degree of the Institute. The results presented in this thesis have not been submitted elsewhere for the award of any degree or diploma.

ACKNOWLEDGEMENTS

Completing this research has been a long journey for me helped by many hands. First and foremost, I would like to convey my gratitude to my thesis advisors Prof. Sushil and Dr. Momaya. I sincerely express my indebtedness and deep sense of gratitude to Prof. Sushil, a dedicated researcher himself, for his invaluable guidance and inputs. But for his encouragement and timely, valuable suggestions, this thesis would have remained incomplete. His patience with every student, ability to switch between multiple topics, positive guidance and encouragement and his attention to detail has influenced me tremendously. I thank him for reinforcing the need for perfection in every thing that is to be done. I hope to carry these lessons forward in my life.

I extend my heartfelt thanks to Dr. Kiran Momaya, who helped me in shaping my thoughts on strategic management and this thesis in particular. He was instrumental in getting me into this research. But for his sustained questioning, patient listening and seeding thoughts this work would not have been possible. I specially thank him for his patient listening to my never ending arguments and complaints. I appreciate his idealistic, long term, big picture thinking and hope to simulate his way of thinking. I am also thankful to the members of my Student Research Committee (SRC), Prof. S.K. Jain and Prof. Kanika T. Bhal for critically appraising this research and giving valuable comments. I thank the other faculty members for their suggestions/support from time to time.

My acknowledgement would be incomplete without mentioning the motivation and unstinting support extended by my husband Mr. K. Ganesh Raj, Partner, Ernst&Young. He has been a critique, guide, and moral support in my various attempts at research. Without his support data collection would have been very difficult. He has been continuously giving me inputs and suggestions to improve my work. A special note of thanks to my elder daughter Sowmya, for her assistance and support in various activities

of this research. My second daughter Sandhya has been a source of joy and happiness. I thank her for the inspiration which she rendered unknowingly.

I am grateful to the executives who spared their valuable time in providing me with useful data and information, required for the study. I would like to express my gratitude to Rahul Acharya, E&Y and CMIE staff who helped me in culling out secondary data.

My parents have been a source of encouragement in all my academic efforts. Their blessings and moral support has been a critical input. Words are inadequate for expressing my gratitude to them. I also thank my brothers and sisters for their constant motivation and support. My thanks to my mother-in-law who helped me in critical times.

I should not forget to place my sincere appreciation for all my fellow Ph. D scholars, especially, Dr. Uday for his support during admission and continuous motivation, Ramesh for his invaluable inputs on methodology, Saboohi for brainstorming, and Sanjay for mutual support and inputs. I would like to thank all my fellow Ph. D scholars. My sincere thanks to Rajini, for her support in formatting this thesis. I thank Col. Bahl for his editing support for the papers.

I also thank Mr. K. K. Bhardwaj, CEO, Vidyatech Solutions Pvt. Ltd. for his support.

I appreciate the cooperation and support extended by other professors, and staff members of DMS.

Above all I thank Almighty, Baba and my Guru, His Holiness Sri. Sri. Krishnananda Theerthar, Shankaracharya of Shakataparam.

(Umamaheswari)

ABSTRACT

Strategic discontinuities like liberalization, globalization or birth of a new industry from technological innovations create immense opportunities for growth for both new comers and incumbents. Few firms from India such as Infosys, Bharti Airtel, Tata Motors, TCS and Reliance grew significantly in the past decade, post economic liberalization in India. This study is an attempt to unravel the factors and the process of such phenomenal, accelerated growth in the Indian context.

This research has three core objectives. First objective is to analyze the growth of Firms of Indian Origin (FIO) and identify those firms that achieved breakthrough growth along with their demographic characteristics such as industry, age, initial size of the firm and group affiliation. The second objective is to find the role of internal and external strategic factors (identified from the literature) in achieving breakthrough competitiveness and growth and their associations. The third objective is to examine the strategy (arena, vehicle, differentiation, speed & sequence and economic logic) of those firms that achieved breakthrough growth.

As both startups and established firms have grown in the last decade, key studies in strategic management and entrepreneurship literature and practitioners' literature in the forms of books and articles were surveyed. Literature review undertaken as a part of the study revealed Resources and Capabilities, Business Practices, Innovations, Growth Orientation, Strategic Leadership, Entrepreneurial Orientation, Strategy and Opportunity Development as important internal factors. External factors were identified as Task Environment, and Constraints and Pressures in an emerging economy context.

Study period was chosen as April 1997 to March 2007. Firms of Indian origin whose revenues were above Rs. 2000 crore, as of March 2007, were considered for the

study. Study excluded financial and government sectors. A total of 101 firms satisfied the study criteria. Study required a mix of approaches in order to answer who, what, how and why of growth. Study is divided in to five phases: (i) Pilot Study using select cases from IT industry (ii) Analysis of financial data using different techniques like Cluster and Discriminant analyses to identify breakthrough growth firms, (iii) Opinion Survey that deals with the opinion of 158 respondents from both breakthrough and moderate growth firms (iv) Case Research of select breakthrough growth firms covering different dimensions using SAP-LAP and Strategy Diamond frameworks, and (v) Synthesis of learning from all these above methodologies to provide a cohesive model of breakthrough growth and growth in the Indian Context.

Growth data such as absolute increase in Sales, absolute increase in Assets, Compound Annual Growth Rate, Annual Average Growth Rate, Return on Capital Employed and Absolute Increase in Profits were analyzed using simple statistics, and cluster and discriminant analyses. This analysis helped in identifying twelve breakthrough growth firms.

Opinion survey had two purposes to fulfill: (i) identify strategic factors that distinguish breakthrough growth from moderate growth firms and (ii) identify the enablers and drivers of breakthrough growth and their inter-relationships. A questionnaire was developed based on the literature survey and corrected with inputs from industry and academic experts. Multiple response strategy was followed to collect 158 responses from 64 firms. The questionnaire was tested for validity and reliability. Statistical analyses were carried out to test research hypotheses. All internal strategic factors were found to distinguish breakthrough growth firms from moderate growth firms. Breakthrough growth firms differed significantly in resources and capabilities, innovations and business practices. The conceptual model of breakthrough growth developed on the basis of literature survey has been tested empirically through bivariate and multivariate analyses.

Further, structural equation modeling technique was applied to develop a model for firm growth. The two models were compared to further clarify the breakthrough growth model. Four cases namely Bharti Airtel, Tata Motors, Infosys Technologies and Reliance Industries were analyzed. Various events, important actors, firm strategies and their results were studied for the study period (1997-2007). Cases were selected on the basis of industry/age/market focus/type of business to maximize learning. Comprehensive details of the cases, dynamic SAP-LAP diagrams and strategy diamond analyses are presented.

Learning from different methodologies is synthesized at the end of the study to answer the research questions and to develop a holistic picture of breakthrough growth. A validated model for breakthrough growth is presented. Suggestions for implementing the learning have been provided. Major recommendations and limitations of the study are also presented.
