HYPERGEOMETRIC SERIES IN THE p -ADIC SETTING, TRUNCATED HYPERGEOMETRIC SERIES AND SUPERCONGRUENCES

by

NEELAM SAIKIA

Department of Mathematics

Submitted

in fulfillment of the requirements of the degree of Doctor of Philosophy

to the

Indian Institute of Technology Delhi
April 2016

Dedicated to
My Family and Supervisor

Certificate

This is to certify that the thesis entitled **Hypergeometric Series in the p -Adic Setting, Truncated Hypergeometric Series and Supercongruences** submitted by **Ms. Neelam Saikia** to the **Indian Institute of Technology Delhi**, for the award of the Degree of **Doctor of Philosophy**, is a record of the original bona fide research work carried out by her under my guidance and supervision. The thesis has reached the standards fulfilling the requirements of the regulations relating to the degree.

The results contained in this thesis have not been submitted in part or full to any other university or institute for the award of any degree or diploma.

Dr. Rupam Barman
Assistant Professor
Department of Mathematics
Indian Institute of Technology Delhi

Acknowledgements

First and foremost, I would like to give my sincere gratitude to my supervisor Dr. Rupam Barman for his constant encouragement, valuable suggestions, infinite support and the freedom he gave me while working on my thesis. His passionate dedication to perfection, definiteness and completeness inspired me a lot to work harder. His great suggestions and invaluable comments have motivated me to write this thesis as good as possible and turning the thesis in to the shape. I am always being honored to have a teacher like him. It is a great opportunity to work with him. I am deeply obliged to him for introducing me to Prof. Ken Ono who helped me with his expert guidance during my research work.

I would like to take the pleasure of thanking Prof. Ken Ono, Dept. of Mathematics and Computer Science, Emory University USA, for his expert guidance. His suggestions provided me a great source of encouragement to work from the very beginning of my research work.

I am indeed grateful to Prof. Sujatha Ramdorai of University of British Columbia, Prof. Anupam Saikia of Indian Institute of Technology Guwahati, Prof. Nayandeep Deka Baruah of Tezpur University, Prof. Dermot McCarthy of Texas Tech University USA, Prof. Ling Long of Louisiana State University USA, and Dr. Gautam Kalita of IIIT Guwahati for their constant support during my research work.

I am grateful to my SRC (Student Research Committee) for their appreciation

and constant support and all the faculty members of Dept. of Mathematics, IIT Delhi as well.

I would like to acknowledge the financial support received from the Department of Science and Technology, Government of India through INSPIRE Fellowship.

I also thank all the faculty members of Department of Mathematical Sciences, Tezpur University for their support.

I thank Dr. Smritishikha Choudhury for her constant appreciation and support. Also, I would like to thank my fellow research scholars Mr. Hasanur Rahman, Mr. Chiranjit Ray, Mrs. Anubha Jindal and Ms. Saroj Rani for their support and help and making this journey to cherish.

I am thankful to Mr. Naba Kanta Sharma of Dept. of Mathematics, Assam University for inspiring and guiding me from my college days.

Finally, I thank all the members of my family for their love and blessings. Their support and believe push me to work in future as well.

New Delhi

Neelam Saikia

Abstract

This thesis studies relations between hypergeometric series in the p -adic setting and algebraic curves; and certain supercongruences between truncated hypergeometric series and p -adic Gamma function. The theory of hypergeometric series over finite fields was developed in the mid 1980s by Greene. Since then, many mathematicians have studied connections between number of points on elliptic curves and hypergeometric series over a finite field. By definition, the arguments of hypergeometric series over finite fields are multiplicative characters of finite fields. Consequently, results involving hypergeometric series over a field are often restricted to primes in certain congruence classes to facilitate the existence of characters of specific orders. To overcome these restrictions, D. McCarthy defined a function ${}_nG_n[\cdots]$ in terms of quotients of the p -adic Gamma function which can best be described as an analogue of hypergeometric series in the p -adic setting. He showed how results involving hypergeometric series over a finite field can be extended to almost all primes using the function ${}_nG_n[\cdots]$. While numerous transformations exist for the finite field hypergeometric series, very few exist for ${}_nG_n[\cdots]$ in full generality. McCarthy posed an interesting question about finding transformations for ${}_nG_n[\cdots]$ which exist for all but finitely many p . In this thesis, by counting points on certain families of elliptic curves over finite fields, we derive certain transformations for ${}_2G_2[\cdots]$ which exist for all but finitely many p .

McCarthy showed that the trace of Frobenius of elliptic curves can be expressed in terms of the function ${}_2G_2[\dots]$. In this thesis, we study the function ${}_nG_n[\dots]$ for any $n \geq 2$. We present explicitly the number of distinct zeros of the polynomials $x^n + ax + b$ and $x^n + ax^{n-1} + b$ over a finite field in terms of the function ${}_{n-1}G_{n-1}[\dots]$ for any $n \geq 2$. We also express the number of points on the hyperelliptic curves $y^2 = x^n + ax + b$ and $y^2 = x^n + ax^{n-1} + b$ over a finite field in terms of the functions ${}_{n-1}G_{n-1}[\dots]$ and ${}_{n-2}G_{n-2}[\dots]$ for any $n \geq 2$. Finally, we establish several summation identities for ${}_nG_n[\dots]$, where $n \geq 2$. We also deduce certain special values of the functions ${}_2G_2[\dots]$ and ${}_3G_3[\dots]$.

Various supercongruences between truncated hypergeometric series and p -adic Gamma function have been conjectured by many mathematicians including Beukers, van Hamme, Rodriguez-Villegas, Zudilin, Chan et al., and many more by Z.-W. Sun. Recently, L. Long and R. Ramakrishna prove several supercongruences using a technique which relies on the relations between the classical and p -adic Gamma functions. Using a similar technique we prove several more general supercongruences for truncated hypergeometric series and p -adic Gamma function. We also prove a supercongruence conjectured by A. Deines, J. Fuselier, L. Long, H. Swisher and F. Tu. A supercongruence conjectured by Rodriguez-Villegas and proved by E. Mortenson using the theory of Greene's finite field hypergeometric functions follows from one of our more general supercongruences.
