My Beloved Mother

CERTIFICATE

This is to certify that the thesis entitled “**STUDIES ON MODIFICATION OF SILK WITH UV RADIATION**” being submitted by **Mr. S.Periyasamy**, to the **Indian Institute of Technology, Delhi** for the award of the degree of **Doctor of Philosophy** in the **Department of Textile Technology**, is a record of bona fide research work carried out by him. Mr. S.Periyasamy has worked under our guidance and supervision, and fulfilled the requirements for submission of the thesis.

The results contained in this thesis have not been submitted, in part or in full, to any other University or Institute for the award of any degree or diploma.

(Dr. Deepti Gupta)

Associate Professor,

Department of Textile Technology

IIT Delhi, New Delhi-110 016

(Prof. M.L.Gulrajani)

Professor,

Department of Textile Technology

IIT Delhi, New Delhi-110 016

Acknowledgement

It gives me immense pleasure to express my deep sense of gratitude and sincere thanks to my guides Dr. Deepti Gupta and Prof. M. L. Gulrajani. The combinational guidance and support provided by them throughout this research work was just incredible and perfect. Whenever, I take an issue to madam, she would give me first preference and do it as quickly as possible. Although sometimes I used to become passionate, she would tolerate me and give her constant support. From the beginning itself, sir's guidance was shaping the entire project and gave synergistic results in every approach. He was always there to help and support me. It was a very joyful experience for me to work under their guidance. I once again express my thanks to them.

I thank the present Head, Dept. of Textile Technology, Prof. P.K. Banerjee, and the previous Heads Prof. Ishtiaque and Prof.V.K. Kothari for their constant support for completion of this project.

I express my thanks to Mr. V.A. Passi for his constant encouragements particularly for asking me to improve my over all personality. I also thank the lab assistants Mr. Jagdeesh and Mr. Suresh for providing their help during the research work.

I thank Mr. Vinod (Store), Mr. Rajkumar (Computer lab) Mr. Biswal (Testing lab), Mr. Amarjeet (X-ray), Mr. Sharma (SEM), Mr. Deepak (AFM) and other members of various laboratories for providing their crucial support for making this research work successful.

I thank my dear friend Dr. Vidyanand Singh (Physics Dept.), for giving me key ideas on performing various tests such as TEM, AFM, SEM, nanoparticles preparations and

analysis. Because of his help, I could fetch the right results in my very first attempt. So I take this opportunity to express my deep sense of gratitude to him.

I take great pleasure in thanking my dear and highly respected friends Dr. V. Saravanan, Dr. G. Partheepan, Mr. Sudheer, Mr. Mukesh Goel, Mr. Ratna Kishore and Mr. Satyanarayana who have been closely associated with me and asking about the progress of my projects and showed lots of true concern for me.

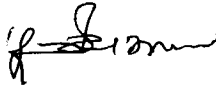

I also thank my juniors Mr. P. Senthil Kumar, Mr. Sadheesh, Mr. S.G. Muthu and Mr. Viju for their genuine concern throughout the work.

I also thank my colleagues Mrs. Nilanjana Biragi, Dr. Roli Purwar and Ms. Anjali for their support during the course of this research work.

It is an immense pleasure for me to thank my beloved friends Mr. P. Mohan Kumar and Mr. A.R. Jagannathan who constantly encouraged me throughout the study.

I thank my parents with deep love.

I find loss of words to express my deep sense of gratitude to my beloved teacher Prof. P.V. Krishnan and Mrs. P.V. Krishnan who represent my dear Lord. I personally feel I am worthy of nothing and an insignificant ant. It is only because of Their causeless mercy and blessings I could accomplish this work to be a successful one.

S. Periyasamy

ABSTRACT

Surface treatment of mulberry silk was carried out using an excimer lamp emitting monochromatic light at 172 nm. Changes in physicochemical properties of silk, as a result of irradiation were characterized and studied by high resolution scanning electron microscope and atomic force microscope. Irradiation led to creation of surface nanopores of 100 nm × 10 nm dimensions on silk, and the size of nanopores continued to increase with irradiation time. Wettability and wickability of silk improved significantly at an irradiation time of 5 min. Chemical changes were studied by carbonyl group estimation. The mechanism for the physicochemical changes has been attributed to the action of high energy photon, atomic oxygen and ozone. Effect of irradiation on weight loss, tensile strength, and crystallinity was found to be insignificant. Wettability and wickability improved significantly even when the silk was irradiated on only one side. Lamp geometry and distance of fabric from the excimer lamp influenced the irradiation effects significantly. Wetting and wicking results of samples irradiated with excimer lamp were similar to those of samples treated with Dielectric Barrier Discharge (DBD) plasma.

Silk fabric with outer face having hydrophobic property and inner face having hydrophilic property was prepared by single side irradiation of silk fabric that had been previously finished with fluorocarbon based finish. The air permeability and bending length of the treated fabric were least affected while the crease recovery and UV, protection improved noticeably.

In another study, the silk fabric was treated with silver nanoparticles produced by chemical reduction method. The nanoparticle size decreased with increase in stirring speed and decrease in process temperature. Smaller particles were formed when the silver nitrate was reduced by glucose as compared to that formed by reduction with

hydrazine. Silk fabrics treated with silver hydrosol of 40 ppm produced at 5°C and 60 ppm produced at 40°C showed 100% antimicrobial activity against gram-positive bacterium *Staphylococcus aureus*. The treated fabric showed 100% antimicrobial activity up to 5 washing cycles and then it decreased.

Abstract	v
Table of Contents	vii
List of Figures	xi
List of Tables	xv
Chapter 1: Introduction and Objectives	3
Chapter 2: Literature Review	9
2.1 Silk	9
2.1.1 Life Cycle of <i>Bombyx mori</i> Silk	10
2.1.2 Chemical Composition of Silk	11
2.1.3 Hydrophilic and Hydrophobic Nature of Silk Fibre	12
2.1.4 Typical Fibroin Molecule	15
2.1.5 Micro-Structure (α and β Forms) of Silk Fibroin Molecule	16
2.1.6 Properties of Silk Fibre	18
2.1.7 Applications of Silk	19
2.1.8 Care Required in Handling Silk	19
2.1.9 Effect of UV Radiation on Silk	20
2.1.10 Summary	22
2.2. Surface Modification Techniques	23
2.2.1 Gamma Rays and Electron Beam Irradiation	23
2.2.2 Low Temperature Plasma (LTP)	24
2.2.2.1 Definition	24
2.2.2.2 Electron and System Temperature	25
2.2.2.3 Principle of Plasma Treatment of Textiles	25
2.2.2.4 UV Radiation in Plasma	26
2.2.2.5 Types of Low Temperature Plasmas	27
2.2.3 UV Lamps	27
2.2.3.1 Modification of Polymers by UV Radiation	28
2.2.4 Laser	28

2.2.4.1 <i>Laser versus Excimer Laser</i>	29
2.2.5 Excimer Lamps	30
2.2.5.1 <i>Operating Principle of Excimer Lamps</i>	31
2.2.5.2 <i>Applications of UV Excimer Lamps</i>	32
2.2.5.3 <i>Selection of an Excimer Lamp</i>	34
2.2.5.4 <i>Market Survey of Xenon Excimer Lamp</i> (λ_{max} : 172 Nm)	36
2.3 Surface Modification of Textile Fibres by Irradiation Techniques	38
2.3.1 LTP Treatment of Cotton	39
2.3.2 LTP Treatment of Wool	40
2.3.3 LTP Treatment of Synthetic Fibres	41
2.3.4 Excimer Irradiation of Textile Fibres	42
2.3.4.1 <i>Principle of Surface Modification by VUV</i> <i>Irradiation</i>	42
2.3.4.2 <i>Applications of UV Excimer Lamps in Textiles</i>	43
2.4 Surface Modification of Silk by Low Temperature Plasma	44
2.4.1 Surface Morphology	44
2.4.2 Wettability	44
2.4.3 Physical Properties	45
2.4.4 Weight Loss	45
2.4.5 Degumming	46
2.4.6 Silk Dyeing	46
2.4.6.1 <i>Depth of Shade</i>	47
2.4.6.2 <i>Fastness Properties</i>	47
2.4.6.3 <i>Dye Absorption</i>	47
2.4.6.4 <i>Printing</i>	48
2.4.7 Surface Modification of Silk by Excimer Irradiation	48
2.5 Summary	49
Chapter 3: Experimental and Methods	53
3.1 Design of Excimer VUV Lamp Radiation System	53
3.1.1 Exposure Chamber for The Excimer Lamp	54
3.1.2 Set Up for Regulated Power Supply	58
3.2 Set Up for Generation of Low Temperature Plasma	62

3.3 Studies on Effect of Irradiation on Silk	68
3.3.1 Excimer Irradiation of Samples	68
3.3.2 Plasma Treatment of Samples	69
3.3.3 Fabric Specifications	69
3.3.4 Effect of Irradiation on Pretreated Silk Samples	69
3.3.5 Hydrophobic Finishing of Silk	70
3.3.6 Preparation of Silver Nanoparticles	70
3.3.7 Application of Silver Nanoparticles	71
3.4 Characterization	71
3.4.1 Surface Morphology	71
3.4.2 Carbonyl Group Estimation	72
3.4.3 Wetting Time	72
3.4.4 Vertical Wicking	73
3.4.5 Horizontal Wicking	74
3.4.6 Weight Loss	75
3.4.7 Contact Angle	75
3.4.8 Estimation of Silver Content	76
3.4.9 Morphological Study of Silver Nanoparticles	77
3.4.10 Antimicrobial Study of Silver Treated Silk Fabrics	78
3.4.11 Other Characterization	79
Chapter 4: Results and Discussion	83
4.1 Effect of 172 Nm Excimer Lamp Irradiation on Mulberry Silk	84
4.1.1 Surface Morphology	85
4.1.2 Surface Chemical Analysis – Carbonyl Group Estimation	88
4.1.3 Studies on Physical Properties of Irradiated Silk	92
4.1.3.1 <i>Vertical Wicking</i>	93
4.1.3.2 <i>Horizontal Wicking</i>	94
4.1.3.3 <i>Wettability</i>	96
