On Time- L_1 Optimal Control of Linear Systems

by

RAJASREE SARKAR

Department of Electrical Engineering

Submitted

in fulfillment of the requirement of the degree of **DOCTOR OF PHILOSOPHY**

to the

INDIAN INSTITUTE OF TECHNOLOGY DELHI

APRIL 2023

CERTIFICATE

This is to certify that the thesis entitled “**On Time- L_1 Optimal Control of Linear Systems**”, submitted by **Rajasree Sarkar** to the Indian Institute of Technology Delhi, for the award of the degree of **Doctor of Philosophy** in Electrical Engineering, is a record of the original, bona fide research work carried out by her under my supervision and guidance. The thesis has reached the standards fulfilling the requirements of the regulations related to the award of the degree.

The results contained in this thesis have not been submitted either in part or in full to any other University or Institute for the award of any degree or diploma to the best of my knowledge.

Prof. Indra Narayan Kar (Supervisor)

Department of Electrical Engineering,

Indian Institute of Technology Delhi.

Prof. Deepak Patil (Supervisor)

Department of Electrical Engineering,

Indian Institute of Technology Delhi.

ACKNOWLEDGEMENTS

I would like to convey my deepest respect, regard and gratitude towards my supervisors, **Prof. Deepak Patil** and **Prof. Indra Narayan Kar**. It is through their constant encouragement and crucial guidance during my tenure as a Research Scholar, that I was able to complete my thesis work. They have inculcated the basics of research in me and enhanced my technical understanding by sharing their experience and knowledge. They have also helped me to complete my thesis by giving their valuable suggestions and I would also like to thank them for refining my writing skills. I would like thank my SRC committee: **Prof. Subhendu Bhasin**, **Prof. Sudipto Mukherjee**, and **Prof. S. Janardhanan** for their comments during my SRC presentations. Their reviews and support have gone a long way in improving my work. I would also like to convey my sincere gratitude towards **Late Prof. Mashuq un Nabi**, **Prof. Shaunak Sen** and **Prof. Subashish Datta** for enriching my technical knowledge. A sincere thanks to **Sunil Ji**, **Virendra Ji** and **Ashu Ji** for all the non-academic support they have provided during my stay in the Control Lab.

I would take this opportunity to acknowledge my M.Tech supervisor, **Prof. T. Raghunathan** who introduced me to non-linear control and whose consistent support I have received throughout my tenure as a researcher. The work on guidance and navigation done with **Dr. Joyjit Mukherjee** has been a great experience overall. A special thanks goes to **Dr. Syed Muhammad Amrr** with whom I have worked on reusable launch vehicles and spacecraft attitude control. I would also like to express my heartfelt thanks to both **Eshwar Dhaulipala** and **Midhun Augustine** for our many discussion sessions related to optimal control. A special mention to all my colleagues from Control Lab for providing me with a positive environment while maintaining an extraordinary work culture, both of which are essential for a researcher to grow personally as well as professionally. I extend my gratitude towards my seniors in the lab:

Dr. Satnesh Singh, Dr. Madan Mohan Rayguru, Dr. Abhilash Patel, Dr. Shefali Kalra, Dr. Neeraj Chawdhury, Dr. Nalin Kumar Sharma, Dr. Sumit Jha, Dr. Spandan Roy, Dr. Sudipta Saha, Dr. Ananya Roy and Dr. Abhishek Dhar who have always stood by me, whenever I have needed them. I would convey my appreciation towards **Madhu, Bhavani, Keerthi, Kishore, Apurba, Sujeet and Atul**, for being wonderful lab-mates. I would like to thank my hostel room-mate **Neisetuonuo Tep** and my friends from other groups of Electrical Engineering Department including **Rashmi Rai, Mayukh Roy Chowdhury, Amar Yelavarti, Rahul Sharma, Aakansha Rajput and Hina Parveen** with whom I have shared a special friendship and camaraderie during my tenure as a research scholar.

I would like to convey my thanks to my research colleague and spouse, **Dr. Arunava Banerjee** for collaborating with me across several fields and for being a consistent source of support on multiple fronts. My sincere gratitude goes to my brother **Indranil Sarkar**, sister-in-law **Sharmistha Sarkar**, and niece **Ishani Sarkar** for their unwavering love and moral support during this journey. I would also like to acknowledge my father-in-law **Amitava Banerjee** and my mother-in-law **Late Mina Banerjee** for their sustained encouragement. Finally, I would want to thank and express my profound gratitude to my mother **Nandini Sarkar** and father **Dr. Tarun Kumar Sarkar**, for their constant belief in me and for being the very foundation of my life, upon which I was able to build my dreams. Their unconditional support, inspiration, blessings, and love have been the primary reasons behind my every success.

Rajasree Sarkar

ABSTRACT

With the emergence of the concept of sparsity, the old classical problem of attaining time and fuel optimality has once again gained significant popularity in control system theory. Such problem referred to as the time- L_1 or time-fuel optimal control problem, has been widely explored in literature many decades ago. However, because of the inherent complexity of the problem, analytical solutions to the problem considering fuel optimality under various constraints of final time were derived only for simple class of linear time-invariant (LTI) systems like double integrators and other second order systems. Whereas, analytical characterization for general class of LTI systems is still under investigation. In this regard, this thesis considers the time- L_1 optimal control problem for state transfer of controllable single input linear time-invariant (LTI) systems with bounded inputs. Using the necessary conditions of Pontryagin's maximum principle (PMP), this thesis derives a combinatorial sequence characterization of the desired control for general LTI system such that only the knowledge of the system order is required to achieve possible sequences. The proposed characterization is then utilized to translate the original optimal problem into sets of equivalent static optimization problems or non-linear programs (NLPs). By performing such translation, a new method is devised to compute time- L_1 optimal control where discontinuities in the control are easily captured. For LTI systems with rational eigenvalues, this method is seen to provide global solution when solved using Lasarre's method based solvers like Gloptipoly, SparsePop etc. The thesis also presents an intermittent feedback scheme where system states are steered to within a user-defined safe region in finite time with reduced fuel consumption. Such intermittent schemes are useful in scenarios where system is subjected to external disturbances or when analytical feedback solution is difficult to achieve. In addition, the thesis presents a time- L_1 efficient approach in the context of multi-agent system and derives a decentralized scheme for consensus tracking in finite time using reduced amount of fuel.

Keywords: Time- L_1 Optimal Control, Bang-off-bang Control, Combinatorial Sequence Characterization, Intermittent Feedback Control, Time- L_1 Optimal Pursuit-Evasion Policy, Decentralized Consensus Tracking, Sparsity, Resource-constrained System.

सार

विरलता की अवधारणा के उद्भव के साथ, समय और ईंधन इष्टतमता प्राप्त करने की पुरानी शास्त्रीय समस्या ने एक बार फिर नियंत्रण प्रणाली सिद्धांत में महत्वपूर्ण लोकप्रियता प्राप्त की है। इस तरह की समस्या को समय-एल₁ या समय-ईंधन इष्टतम नियंत्रण समस्या के रूप में जाना जाता है, कई दशकों पहले साहित्य में व्यापक रूप से खोजा गया है। हालाँकि, समस्या की अंतर्निहित जटिलता के कारण, अंतिम समय की विभिन्न बाधाओं के तहत ईंधन इष्टतमता पर विचार करने वाली समस्या का विश्लेषणात्मक समाधान केवल रैखिक समय-अपरिवर्तनीय (एलटीआई) प्रणालियों के सरल वर्ग जैसे डबल इंटीग्रेटर्स और अन्य द्वितीय क्रम प्रणालियों के लिए प्राप्त किया गया था। जबकि, एलटीआई सिस्टम के सामान्य वर्ग के लिए विश्लेषणात्मक लक्षण वर्णन अभी भी जांच के दायरे में है। इस संबंध में, यह थीसिस सीमित इनपुट के साथ नियंत्रणीय एकल इनपुट लीनियर टाइम-इनवेरिएंट (एलटीआई) सिस्टम के राज्य हस्तांतरण के लिए समय-एल₁ इष्टतम नियंत्रण समस्या पर विचार करता है। पॉट्रीगिन के अधिकतम सिद्धांत (पीएमपी) की आवश्यक शर्तों का उपयोग करते हुए, यह थीसिस सामान्य एलटीआई प्रणाली के लिए वांछित नियंत्रण के संयोजन अनुक्रम लक्षण वर्णन को प्राप्त करती है, जैसे कि संभावित अनुक्रमों को प्राप्त करने के लिए केवल सिस्टम ऑर्डर का ज्ञान आवश्यक है। प्रस्तावित लक्षण वर्णन का उपयोग मूल इष्टतम समस्या को समतुल्य स्थैतिक अनुकूलन समस्याओं या गैर-रैखिक कार्यक्रमों (एनएलपी) के सेट में अनुवाद करने के लिए किया जाता है। इस तरह के अनुवाद को करने से, समय की गणना करने के लिए एक नई विधि तैयार की जाती है-एल₁ इष्टतम नियंत्रण जहां नियंत्रण में असंततता आसानी से पकड़ी जाती है। तर्कसंगत इंजन वैल्यूज के साथ एलटीई सिस्टम के लिए, इस पद्धति को वैश्विक समाधान प्रदान करने के लिए देखा जाता है, जब लैसेरर की विधि आधारित सॉल्वर जैसे ग्लोप्तीपॉली, स्पार्सपॉप आदि का उपयोग करके हल किया जाता है। थीसिस एक आंतरायिक प्रतिक्रिया योजना भी प्रस्तुत करती है, जहाँ सिस्टम स्टेट्स को एक उपयोगकर्ता-परिभाषित सुरक्षित क्षेत्र के भीतर चलाया जाता है। कम ईंधन की खपत के साथ सीमित समय। ऐसी आंतरायिक योजनाएँ उन परिदृश्यों में उपयोगी होती हैं जहाँ सिस्टम बाहरी गड़बड़ी के अधीन होता है या जब विश्लेषणात्मक प्रतिक्रिया समाधान प्राप्त करना कठिन होता है। इसके अलावा, थीसिस मल्टी-एजेंट सिस्टम के संदर्भ में एक समय-एल₁ कुशल दृष्टिकोण प्रस्तुत करती है और ईंधन की कम मात्रा का उपयोग करके सीमित समय में आम सहमति पर नज़र रखने के लिए एक विकेन्द्रीकृत योजना प्राप्त करती है।

कीवर्ड: समय-एल, इष्टतम नियंत्रण, बैंग-ऑफ-बैंग नियंत्रण, संयोजन अनुक्रम विशेषता, आंतरायिक प्रतिक्रिया नियंत्रण, समय-एल, इष्टतम पीछा-अपवंचन नीति, विकेंद्रीकृत आम सहमति ट्रैकिंग, विरलता, संसाधन-विवश प्रणाली।
