

STATISTICAL CHARACTERIZATION
OF RADIATION
FROM DIFFERENT MECHANISM

By

VIJAY. A. HARWALKAR

Thesis submitted to
Indian Institute of Technology, Delhi
for the award of Degree of
DOCTOR OF PHILOSOPHY

Department of Physics,
Indian Institute of Technology, Delhi

MARCH, 1984

THE THESIS IS DEDICATED TO

'ANSUJOPA'

ACKNOWLEDGEMENTS

It is indeed with great pleasure that I record my gratitude to Dr. S. Chopra who supervised my research program. His guidance was remarkable for the high degree of professionalism. While giving utmost freedom in choosing topics of interest, he would invariably demand to know if it led to anything fruitful. With this dictum he would ensure that the efforts were properly channelised. Not infrequently I would receive encouragement to scale down the frustration consequent to reaching a dead end or ideas and suggestions which proved to be of immense value or urgings to get on with the task. In fact I find it extremely difficult to do full justice to the contributions of Dr. Chopra during the various stages of my research program.

I enjoyed an extremely fruitful collaboration with my senior and friend Dr. H.B. Bohidar who was the only other member of the Quantum Electronics Laboratory in the IIT Delhi when I joined. Several apparently insurmountable issues were thrashed out during the barnstorming sessions which we often had. It was a lasting acquaintance that I developed with Dr. R.G. Raj, V.L. Gokhale, Navneet, S. Habib amongst numerous others. They played not an insignificant role during my tenure here. The least that can be said of them is that their friendship was positively stimulating. I would be failing in my duty if I were not to acknowledge the kind hospitality of the Ramachandran, Phadke and Salpekar families. All of these people were instrumental to a considerable extent in converting my chance entry in research into a firm commitment by choice.

There were several persons who, despite their remoteness from my project, did exert themselves in every possible manner to help me. Words do not adequately express my gratitude to them but their acquaintance will be cherished for a long time to come. I cannot but appreciate the speed and meticulousness with which Ms. Neelam Dhody typed the manuscript.

Last but not the least, the facilities and financial assistance provided by the Indian Institute of Technology, New Delhi, and the Council of Scientific and Industrial Research of India, New Delhi, is gratefully acknowledged.

- VIJAY A. HARWALKAR
