

BIOGAS TECHNOLOGY FOR ENERGY AND FERTILIZER MANAGEMENT IN AGRICULTURE

by

JAGDISH PRASAD SHARMA

*A THESIS SUBMITTED TO THE
INDIAN INSTITUTE OF TECHNOLOGY, DELHI
FOR THE AWARD OF THE DEGREE OF
DOCTOR OF PHILOSOPHY*

**Centre for Rural Development and Appropriate Technology
INDIAN INSTITUTE OF TECHNOLOGY, DELHI**

March, 1989

C E R T I F I C A T E

This is to certify that the thesis entitled "BIOGAS TECHNOLOGY FOR ENERGY AND FERTILIZER MANAGEMENT IN AGRICULTURE" submitted by Mr. JAGDISH PRASAD SHARMA has been prepared under our supervision in conformity with the rules and regulations of Indian Institute of Technology, Delhi. The research report and results presented in this thesis have not been submitted for any degree in any other University/ Institution.

N.K. Bansal
(N.K. BANSAL)
Chief Scientific Officer,
Centre for Energy Studies,
Indian Institute of Technology,
New Delhi - 110016.

Padma Vasudevan
(PADMA VASUDEVAN)
Professor and Head,
Centre for Rural
Development & Appropria-
te Technology, Indian
Institute of Technology,
New Delhi - 110016.

DEDICATED TO

MY WIFE SUMATI AND DAUGHTER MANASI

ACTUALLY THE TIME DEVOTED TO THIS

WORK

BELONGS TO THEM

A C K N O W L E D G E M E N T S

Though words falter to acknowledge all my literacy debt, I wish to express my deepest sense and gratitude to Dr. (Mrs) Padma Vasudevan, Professor and Head, Centre for Rural Development and Appropriate Technology, Indian Institute of Technology, Delhi, under whose valuable guidance and constant supervision, I had the opportunity of carrying out this work. I consider it my proud privilege to express my deep sense of gratitude to Dr. N.K. Bansal, Chief Scientific Officer, Centre for Energy Studies, for his invaluable guidance, constructive suggestions, keen and sustained interest during the entire period of investigation and preparation of manuscript.

I wish to put on record my cordial thanks to Mr. M.S. Choudhary, Agricultural Engineer and Senior Instructor, Rudrapur Block, Nainital for his day and night help in data collection in the block. I would like to thank all the farmers who really helped wholeheartedly in data collection. My special thanks are due to all the Village Level Workers of Rudrapur Block for promptly providing the needed information.

I am indebted to Messers Rakesh Pandey, G. Giridhar, S.K. Verma, S.K. Jain, S.N. Naik and Mrs. Vandana Gupta for their help and kind cooperation during the entire process of the research work.

I wish to express my deep sense of reverence and gratitude to my family members whose love, inspiration, encouragement and support in all possible ways lead me to the success in this work.

I have no words to express my deep sense of respect and gratitude to Dr. S.N.S. Gaur, Mr. S.N. Sharma, Pandit Ramgopal Sharma, Er. S.C. Tiwari, Dr. M.C. Sharma and Er. S.C. Sharma for their constant source of inspiration and encouragement to me, throughout the study.

I extend my thanks to organisations, Indian Agricultural Research Institute, Tata Energy Research Institute, Fertilizer Association of India, Indian National Scientific and Documentation Centre for providing me help in different ways.

I am thankful to Mr. Satyavir Verma, typist, for typing this manuscript efficiently.

J.P. Sharma.
(JAGDISH PRASAD SHARMA)

List of tables

List of figures

List of appendices

1.	Introduction	
1.1	Energy scene in rural India	1
1.2	History of biogas technology and developments in India	8
1.3	Uses of biogas technology	12
1.4	Biogas system and the present study	16
2.	Survey and analysis of biogas systems in selected blocks of Nainital district	27
2.1	Survey of fuel use pattern, availability of fuelwood, potential for setting up biogas plants, cost and technical reasons for not adopting biogas technology	28
2.1.1	Objectives	29

	<u>Page</u>
2.1.2 Methodology	29
2.1.3 Brief description of the regions	31
2.1.4 Results and discussion	33
2.1.5 Conclusions	43
2.2 Techno and socio-economic study of biogas plants installed in Rudrapur block of Nainital district	45
2.2.1 Objectives	45
2.2.2 Methodology	46
2.2.3 Results and discussion	47
2.2.4 Conclusions	68
2.3 Strategies suggested for the pro- motion of biogas technology in the region.	70
2.3.1 Strengthening existing organi- sational support	70
2.3.2 Training for beneficiaries and other personnels associated with biogas development programme	73
2.3.3 Reducing the cost of construction and maintenance	80

	<u>Page</u>
2.3.4 Low gas production in winter season	83
2.3.5 Alternative feed materials for biogas production	85
3. Economic evaluation of biogas plants	
3.1 Introduction	89
3.2 Analysis	92
3.3 Results and discussion	94
3.4 Conclusions	97
4. Alternative feed materials for biogas production	
4.1 Introduction	101
4.2 Characteristics of <u>Leucaena leucocephala</u>	104
4.3 Production of biogas	107
4.3.1 Experimental setup	107
4.3.2 Feeding material	108
4.3.3 Results and discussion	110

	<u>Page</u>
5. Cost optimisation of chemical fertilizers	
5.1 Introduction	116
5.2 Analysis	117
5.3 Results and discussion	120
6. Displacement of chemical fertilizers by biogas plant slurry	
6.1 Introduction	129
6.2 Soil of the experimental field	135
6.3 Slurry analysis	137
6.4 Experiment	137
6.5 Crop production	140
6.6 Results and discussion	142
6.6.1 Crop yields	142
6.6.2 Effect on physico-chemical properties of soil	146
Summary and conclusions	156
Scope of the future work	164
Appendices	165

LIST OF TABLES

<u>No.</u>	<u>Content</u>	<u>Page</u>
2.1	Profile of the respondents	34
2.2	Average percentage consumption of non-commercial fuels in all the three regions	35
2.3	Availability of fuelwood and problems faced in its collection and utilisation	37
2.4	Level of awareness about biogas technology	39
2.5	Livestock ownership pattern in the regions	40
2.6	Reasons for not constructing biogas plants	42
2.7	Size of plant vs type of plant	48
2.8	Relationship of plant size with the family size and the number of animals	51
2.9	Plant operation and maintenance practices followed by the plant owners	54
2.10	Various technical problems faced by the plant owners	59

<u>No</u>	<u>Content</u>	<u>Page</u>
2.11	Views of farmers regarding biogas impact	62
2.12	Performance/Presence of the repairing centre	63
3.1	Economic data of different community size biogas plants	96
4.1	Estimated potential for energy from biomass	103
4.2	Quantities of different feed materials used in the experiments	109
4.3	Amount and composition of biogas produced from one kg. of dry weight of different feed materials	110
5.1	Different crops and their fertilizer requirement (kg/ha) on nutrient basis	121
5.2	Different sources of fertilizers available in India along with their nutrients and costs	122
5.3	Optimum quantities (in kgs) of different fertilizers required for different crops with their optimum costs/ha of land.	124

	<u>Page</u>
6.1 Short fall in fertilizer in India	131
6.2 Soil properties of the experimental field	138
6.3 Per hectare fertilizer requirement (in kgs) for different crops	140
6.4 Mean yields of crops under different treatments (kg/plot)	142
6.5 Physico-chemical properties of soil after crop production	147
