

OPERATIONAL CHARACTERISTICS OF FLUIDIZED-BED REACTORS FOR ANAEROBIC PROCESS

by
SREEKRISHNAN T. R.

Thesis submitted to the
Indian Institute of Technology, Delhi
for the Award of the Degree of

DOCTOR OF PHILOSOPHY

**BIOCHEMICAL ENGINEERING RESEARCH CENTRE
INDIAN INSTITUTE OF TECHNOLOGY, DELHI**

HAUZ KHAS, NEW DELHI-110016

1989

CERTIFICATE

We are satisfied that the thesis entitled " Operational Characteristics of Fluidized-bed Reactors for Anaerobic Process " submitted by Mr.Sreekrishnan.T.R is worthy of consideration for the award of the degree of Doctor of Philosophy and is a record of the original bonafide research work carried out by him under our guidance and supervision and that results contained in it have not been submitted in part or full to any other University or Institute for the award of any degree.

K.B.Ramachandran

K.B.RAMACHANDRAN

Professor

P.GHOSH

Professor

ACKNOWLEDGEMENT

I ACKNOWLEDGE, with deep sense of gratitude -

Prof.P.Ghosh and Prof.K.B.Ramachandran, my project supervisors, for their able guidance, stimulating discussions and invaluable suggestions and advice

Prof.T.K.Ghose for his advice and interest in the project

Prof.S.N.Mukhopadhyay, head, BERC, for his continued interest and co-operation throughout this work

Dr.P.K.Roychoudhury, for his co-operation in the smooth operation of the experimental setup

Other faculty members of BERC, for their interest and valuable suggestions

Ms.Radhika Satsangee, Mr.A.K.Panda, Mrs.Nandini Seshadri and other colleagues for their encouragement, co-operation and open discussions

Mr.Shiv Singh for his technical help as well as advice

Mr.V.K.Ghosh for his expert assistance with photomicrography

Mrs.Sushma Gupta, Mrs.Susamma Mathai, Mrs.Renu Sethi,

Mr.J.A.Khan, Mr.G.P.Yadav, Mr.D.V.Sharma, Mr.K.P.Bahuguna,

Mr.Mukesh Anand and Mr.Sant Ram for their technical assistance

Mr.R.N.Shukla, Mrs.Neera Verma, Mrs.Sunita Abrol, Mr.K.S.Chawla, Mr.S.K.Khurana, and Mr.Bhagvan Singh for their sincere co-operation

Mr.M.M.Suri of "Biofoods" for supplying the yeast industry waste water

Prof.Swaminathan and skilled workers of IDDC for

fabrication of the reactors

Mr.M.K.Gaur for typing the manuscript

All my friends for their moral support.

List of tables	
List of figures	
List of photographs	1
Chapter 1: Introduction	
Chapter 2: Literature review	11
2.1 Anaerobic digestion - Microbiology and Biochemistry	11
2.2 Process configurations	17
2.3 Anaerobic fluidized-bed reactor	19
2.3.1 Biofilm formation in an anaerobic FBR	20
2.3.2 Fluidized-bed anaerobic reactor performance	30
2.3.3 Process kinetics	44
2.3.4 Fluidization mechanics	51
2.3.5 Biofilm models	58
Chapter 3: Materials and Methods	64
3.1 Details of experimental setup and materials used	64
3.1.1 Experimental setup	64
3.1.2 Carrier	67
3.1.3 Medium	68
3.1.4 Inoculum	69
3.2 Analytical methods	69
3.2.1 Suspended cells concentration	69
3.2.2 Gas production rate and gas composition	70
3.2.3. Volatile fatty acids concentration	70
3.2.4 Glucose concentration	71

3.2.5 Total sugar concentration	71
3.2.6 Chemical oxygen demand	72
3.2.7 Biofilm thickness	72
3.2.8 Weight of biomass per unit weight of sand	73
3.2.9 Biofilm surface scanning	73
3.2.10 Methane producing capacity of the inoculum	74
Chapter 4:Results and Discussion	75
4.1 Biofilm formation in anaerobic FBR using synthetic non-acidified glucose waste water	75
4.1.1 Effect of initial circulation of inoculum through the bed (seeding of the bed) on biofilm formation	76
4.1.2 Effect of dilution rate on biofilm formation	82
4.1.3 Effect of COD loading rate on biofilm formation	95
4.1.4 Effect of inoculum quantity on biofilm formation	106
4.1.5 Effect of inoculum quality on biofilm formation	118
4.1.6 Discussion	128
4.2 Acidification of glucose waste water in anaerobic FBR	134
4.2.1 Effect of dilution rate	135
4.2.2 Effect of COD loading rate and pH	140
4.2.3 Film formation in acid reactor	146
4.3 Biofilm formation using acidified glucose waste water	150
4.3.1 Effect of suspended cells on well formed biofilm	151
4.3.2 Discussion	155
4.4 Conceptual model of biofilm formation for anaerobic systems	157
4.5 Experiments with yeast waste water	159
4.6 Estimation of biofilm characteristics	172

4.6.1 Biofilm thickness	172
4.6.2 Biofilm density	174
4.6.3 Total biomass holdup	175
4.6.4 Biomass concentration	176
4.6.5 Bed porosity	176
4.7 COD Reduction and methane production characteristics	177
4.8 Bed fluidization characteristics	181
4.9 Biofilm model	187
Chapter 5: Summary and Conclusion	199
Nomenclature	218
