Submitted

**in fulfilment of the requirements of
the degree of Doctor of Philosophy
to the**

INDIAN INSTITUTE OF TECHNOLOGY, DELHI

JULY 1976

CERTIFICATE

This is to certify that the thesis entitled 'Design, Development and Image Quality Studies of High Speed Rotating Mirror Framing Camera' which is being submitted by Shri Ranvir Kumar to the INDIAN INSTITUTE OF TECHNOLOGY, DELHI, for the award of the Degree of Doctor of Philosophy in the Department of Applied Mechanics, is a record of bonafied research carried out by him. Shri Ranvir Kumar worked under our guidance and supervision and has fulfilled the requirements for the submission of this thesis, which to our knowledge, has reached the requisite standard.

The results contained in this thesis have not been submitted in part or in full, to any other University or Institute for the award of any degree or diploma.

ACKNOWLEDGEMENTS

I wish to express my deep sense of gratitude to Prof. Harsh Vardhan for his valuable guidance, keen interest and constant encouragement throughout the course of this work. I am also grateful to Prof. R.C. Malhotra for his useful suggestions and encouragement.

Special thanks are due to Shri S.K. Nag and mechanical workshop staff for their valuable contribution in fabricating various camera parts with great skill and precision. I sincerely acknowledge the help rendered by Dr. C. Mitra and optical workshop staff in the fabrication of optical components.

It is a pleasure to express my warm appreciation to my colleagues particularly Dr. C.S. Vikram, Dr. K.N. Chopra and Shri A.K. Dixri for their useful suggestions and co-operation.

I am thankful to Shri Vijay Sehgal for helping in the preparation of the final manuscript. And finally, I need to especially acknowledge the pains taken by Shri Om Parkash in typing the manuscript neatly and carefully and Shri K.S. Bhinder for drawing all the figures.

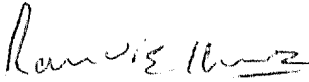

RANVIR KUMAR

TABLE OF CONTENTS

	Page
CERTIFICATE	
ACKNOWLEDGEMENTS	
TABLE OF CONTENTS	iv-vi
LIST OF SYMBOLS	vii-viii
PREFACE	1
CHAPTER I	
INTRODUCTION	6
1.2 Limitations of human vision	6
1.3 Methods of recording rapid events	9
1.3.1. Intermittent film movement cameras	10
1.3.2. Continuous film movement cameras	10
1.3.3. Stationary film cameras	11
1.3.4. Kerr cell cameras	12
1.3.5. Image tube cameras	14
1.4. Applications	15
CHAPTER II	
BASIC THEORY AND DESIGN PARAMETERS OF A ROTATING MIRROR FRAMING CAMERA	16
2.1 Optical system	19
2.2 Shuttering arrangement	20
2.3 Principal parameters and design considerations	24
2.4 Optical system design	31

CHAPTER III

STUDY OF VARIOUS FACTORS LIMITING THE RESOLUTION OF A ROTATING MIRROR CAMERA	35
3.1 Mirror distortion	36
3.2 Diffraction effects	39
3.3 Effects of mirror thickness	41
3.4 Air turbulence effects	47
3.5 Conclusions	48

CHAPTER IV

DESIGN AND CONSTRUCTION OF A HIGH SPEED ROTATING MIRROR PHOTOGRAPHIC FRAMING CAMERA	50
4.1 Optical system	51
4.1.1 Objective lens	52
4.1.2 Field lens	52
4.1.3 Framing lenses	53
4.1.4 Optical view finder	54
4.2 Rotating mirror drive	55
4.2.1 Design of a high speed turbine	56
4.2.2 Determination of various turbine parameters	57
4.2.3 Bearings	59
4.2.4 Fabrication of the mirror	60
4.2.5 Driving power	64
4.2.6 Performance	65
4.3 Construction	65
4.4 Operation	66

CHAPTER V

PERFORMANCE EVALUATION AND IMAGE QUALITY STUDIES OF HIGH SPEED FRAMING CAMERA	68
5.1 Introduction	68
5.2 Theoretical foundations of optical transfer function	71
5.2.1 Spread function	72
5.2.2 Optical transfer function	73
5.3 Application of Fourier analysis technique to high speed framing camera	76
5.4 Performance studies using rectangular wave gratings as test targets	81
5.5 Performance studies using triangular wave gratings as test targets	84
5.6 Use of truncated wave periodic objects as test targets	85
5.7 Results and discussions	87

CHAPTER VI

ANALYSIS OF IMAGE FORMING CHARACTERISTICS OF PHOTOGRAPHIC EMULSIONS AND IMAGE TUBES	89
6.1 Photographic emulsions	90
6.2 Image tubes	93
6.2.1 Image orthicon	94
6.2.2 Vidicon tube	95
6.3 Results and discussions	99
