

OPERATIONAL MANAGEMENT OF IRRIGATION SYSTEMS FOR SINGLE AND MULTIPLE CROPS

BY
N. HANUMANTHA RAO

THESIS SUBMITTED TO THE
INDIAN INSTITUTE OF TECHNOLOGY, DELHI
FOR THE AWARD OF THE DEGREE OF
DOCTOR OF PHILOSOPHY

DEPARTMENT OF CIVIL ENGINEERING
INDIAN INSTITUTE OF TECHNOLOGY, DELHI

MARCH 1985

CERTIFICATE

This is to certify that the thesis entitled 'Operational Management of Irrigation Systems for Single and Multiple Crops', being submitted by Mr. N. Hanumantha Rao to the Indian Institute of Technology, Delhi, for the award of the degree of Doctor of Philosophy, is a bonafide record of the research work carried out by him under our supervision. In our opinion the thesis has reached the requisite standard fulfilling the requirements relating to the said degree. The material contained in this thesis has not been submitted in part or in full to any other University or Institute for the award of any degree or diploma.

P.B.S. Sama
Senior Hydrologist
Water Technology Centre
Indian Agricultural
Research Institute

Subhash Chander
Professor of Civil Engg.
Indian Institute of Technology
Delhi

P. Natarajan
Prof. of Civil Engg
Indian Institute of
Technology
Delhi

ACKNOWLEDGEMENTS

The work reported in this study was carried out at the Water Technology Centre, Indian Agricultural Research Institute (IARI), New Delhi, where I am employed and, at the Department of Civil Engineering, Indian Institute of Technology (IIT), Delhi where I am a part-time Research Scholar. It was done under the supervision of Dr.P.B.S.Sarma, Senior Hydrologist at IARI, and Prof. Subhash Chander and Prof. P. Natarajan, Professors of Civil Engineering at the IIT, Delhi. I express my sincere Gratitude to my supervisors for their critical interest and encouragement throughout the course of this study.

I am grateful to Dr. A.M. Michael, Director, IARI and Project Director, Water Technology Centre, for his support and Continual interest in this work. I am also grateful to the Dean, Post Graduate School, IARI for permitting me to register as an external candidate for the Ph.D. degree at the IIT Delhi.

I am thankful to the authorities of the Nagarjunasagar Right Canal Command Area Authority, Guntur, in particular the Pilot Project Team of the Paladugu Major distributary, for their co-operation in providing some of the basic data used in this study.

I am grateful to the authorities of the Computer Centre, Indian Agricultural Statistics Research Institute, New Delhi for access to their computer facilities.

Mr. Sasidharan Pillai, of the Data Processing Laboratory, Water Technology Centre, IARI provided considerable assistance in the execution of the computer related work. I am grateful to him.

for his kind assistance.

I am thankful to Mr. Bansi Dhar, Technical Assistant, Water Technology Centre for his support at various stages of this work. Mr. Ghanshyam Singh prepared the drawings and Provided considerable help in the preparation of the manuscript.

Discussions with Dr. U.S. Victor and Dr. S.K. Sondhi proved highly beneficial at various stages of this work.

Finally, I must thank Mr. Shamsher Singh for his patient and efficient help in the typing of this manuscript.

(N. Hanumantha Rao)

CONTENTS

	Page No.
List of figures	(i)
List of Tables	(iii)
Chapter 1 Introduction	1
1.1 Motivation	1
1.2 The Irrigation Water Management Problem	4
1.3 Objectives of the Present Study	7
Chapter 2 Review of Literature	10
2.1 The Soil Water Balance	11
2.1.1 Infiltration, Runoff, Redistribution and Percolation	11
2.1.2 Evapotranspiration	14
2.1.2.1 Potential evapotranspiration	16
2.1.2.2 Soil water availability to plants and actual evapotranspiration	18
2.2 Water Production Functions of Crops	21
2.2.1 Dynamics of Crop Response to Water	21
2.2.2 Water Variable Associated with Crop Yield	24
2.2.3 Seasonal Water Production Functions	26
2.2.3.1 Production functions based on seasonal evapotranspiration	26
2.2.3.2 Production functions based on seasonal irrigation depth	28
2.2.4 Dated Water Production Functions of Crops	30
2.2.4.1 Dated water production functions based on evapotranspiration	30
2.2.4.2 Dated water production functions based on irrigation depth	38

2.2.5	Comparisons Between Different Models and Field Observations	39
2.3	Optimal Irrigation Programming With Limited Water	42
2.3.1	Irrigation Programming as a Multistage Sequential Decision Process	42
2.3.2	Irrigation Optimization Models	43
2.4	An Assessment	47
Chapter 3	The Soil Water Balance Model	52
3.1	Conceptual Model of Soil Water Balance	52
3.2	Estimation of Probable Weekly Rainfall	55
3.2.1	Determination of Suitable Probability Density Function	56
3.2.2	Normalization of Rainfall Distribution	56
3.3	Components of Soil Water Balance Model	59
3.3.1	Infiltration and Redistribution	59
3.3.2	Evapotranspiration	63
	3.3.2.1 Potential Evapotranspiration	63
	3.3.2.2 Actual Evapotranspiration	64
3.4	Evaluation of the Soil Water Balance Model	71
3.4.1	Input Data	71
3.4.2	Application	73
3.5	Summary and Discussion	77
Chapter 4	The Water Production Function	80
4.1	Generalized Water-Yield Response Relationships	80
4.2	Development of the Dated Production Function	83
4.2.1	Feasible Formulations of the Dated Production Function	85
4.2.2	Comparisons Among the Production Functions	89
4.3	Summary and Discussion	93

Chapter 5	Intraseasonal Allocation of Water For a Single Crop	95
5.1	The Objectives of the Irrigation Water Allocation Problem	95
5.2	Mathematical Formulation of the Irrigation Water Allocation Problem	97
5.2.1	Growth Stages and Decision Intervals	99
5.2.2	Rainfall and Potential Evapotranspiration in Each Decision Interval	99
5.2.3	Root Depth and Incremental Available Soil Moisture in Each Decision Interval	101
5.2.4	The Recursive Equation	103
5.3	Irrigation Water Allocation	110
5.3.1	Optimal Irrigation Water Allocation Among Growth Stages	110
5.3.2	Irrigation Water Allocation in Decision Intervals	113
5.4	The Computational Procedure	114
5.5	Application	114
5.5.1	Rainfall, PET and Root Growth During Decision Intervals	120
5.5.2	Recursive Function Tables for Individual Stages	121
5.5.3	Optimal Irrigation Water Allocation to Each Growth Stage	123
5.5.4	Weekly Irrigation Programmes	123
5.5.5	Application to Case Study Area	132
5.6	Summary and Discussion	135
Chapter 6	Seasonal and Intraseasonal Allocation of Water Among Crops	145
6.1	The Multicrop Irrigation Water Allocation Problem	146
6.2	Mathematical Formulation of the Optimization Problem - Allocation of Seasonal Supplies	151
6.2.1	Seasonal Water-Yield Response Functions	151
6.2.2	Allocation of Seasonal Supply to Different Crops	154
6.2.3	Weekly Irrigation Programmes for Each Crop	156

6.3	Mathematical Formulation of the Optimization Problem - Intraseasonal Allocation	157
6.3.1	The Problem of Competition for Water in an Intraseasonal Interval	157
6.3.2	Crop Response to Water Applications in a Decision Interval	158
6.3.2.1	Water Use Vs Yield Relationships from the Beginning of Each Growth Stage to the End of the Season	160
6.3.2.2	Yield Response and Returns to Different Water Allocations in a Decision Interval	161
6.3.3	Allocation of Irrigation Water Among Crops in a Decision Interval	164
6.3.4	Modification of Input Schedules and Production Function Parameters for Successive Weeks	165
6.4	The Computational Procedure	167
6.5	Application	173
6.5.1	Parameters of Seasonal Water Production Function	173
6.5.2	Validity of the Procedure for Parameter Estimation	177
6.5.3	Allocation of Seasonal Supplies Among Crops	179
6.5.4	Weekly Irrigation Programmes for Each Crop	186
6.5.5	Intraseasonal Allocation of Water	186
6.5.5.1	Weekly Water-Yield Response Functions and Return Functions	186
6.5.5.2	Optimal Allocation of Water Among Crops in a Week	188
6.5.5.3	Modification of Irrigation Programmes and Parameters of Response Functions for Successive Weeks	192
6.6	Summary and Discussion	194
Chapter 7	Real Time Adaptive Management of Irrigation Systems	200
7.1	The Real Time Adaptive Management Problem	200
7.2	Problem Formulation	201

7.2.1	Input from On-line Data Source	202
7.3	The Procedure for Adaptive Management	205
7.4	Application	207
7.5	Summary and Discussion	215
Chapter 8	Summary, Conclusions and Future Research	218
8.1	Summary	218
8.2	Conclusions	221
8.3	Future Research	223
