

A MODEL POTENTIAL STUDY OF  
LATTICE DYNAMICAL PROPERTIES OF SOME METALS

By

K.J. GEORGE

Thesis submitted to

INDIAN INSTITUTE OF TECHNOLOGY DELHI

for the award of the degree of

DOCTOR OF PHILOSOPHY

Department of Physics

Indian Institute of Technology Delhi

New Delhi 29

June, 1978

### ACKNOWLEDGEMENTS

The author expresses his deep sense of gratitude to Dr. L.M. Tiwari, Assistant Professor, Department of Physics, IIT Delhi, for his valuable guidance and constant encouragement.

Thanks are due to friends and colleagues, Dr. Anand Swaroop, Dr. B.M. Bohra, Dr. (Mrs.) Asha Jindal, Mr. R.N. Baghel, Mr. R.Y. Thakur and Mr. M.P. Joseph, for their timely help and stimulating discussions.

Financial assistance from IIT Delhi is thankfully acknowledged.

K.J. GEORGE

## CONTENTS

	PREFACE	i
	References	vii
I.	INTRODUCTION	1
	References	10
II.	CONCEPT OF PSEUDOPOTENTIAL	12
2.1	Introduction	12
2.2	Plane Wave Method	13
2.3	Augmented Plane Wave Method	13
2.4	Orthogonalized Plane Wave Method	15
2.5	Pseudopotentials	16
2.6	Separation of Pseudopotentials	19
2.7	Model Potentials	22
	References	28
III.	A NEW MODEL POTENTIAL	30
3.1	Introduction	30
3.2	Construction of a New Model Potential	31
3.3	Screening	34
3.4	Exchange and Correlation	39
3.5	Energy Wave Number Characteristics	41
3.6	Determination of the Pseudopotential Parameters	44
3.7	Results and Discussions	46
	Tables	49
	Figures	54
	References	75

(cont'd)

IV.	ELECTRON TRANSPORT PROPERTIES	77
4.1	Introduction	77
4.2	Theory	81
4.2.1	Probability of scattering of electrons in solids	81
4.2.2	Distribution function in an electric field	84
4.2.3	Relaxation time	85
4.2.4	Electrical conductivity	86
4.2.5	Thermoelectric power	87
4.2.6	Monovacancy resistivity	88
4.2.7	Liquid metal structure factor	89
4.3	Results and Discussions	91
	Tables	94
	References	100
V.	PHONON DISPERSION	102
5.1	Introduction	102
5.2	Theory	104
5.2.1	Dynamical matrix	104
5.2.2	Coulomb contribution	107
5.2.3	Repulsive contribution	108
5.2.4	Electronic contribution	109
5.2.5	Phonon dispersion	111
5.3	Results and Discussions	111
	Figures	119
	References	126

(cont'd)

VI.	EFFECTIVE ION-ION INTERACTION	128
6.1	Introduction	128
6.2	Theory	131
6.2.1	Effective ion-ion interaction	131
6.2.2	Tangential and radial force constants	134
6.2.3	Interatomic force constants	134
6.2.4	Elastic constants	135
6.3	Results and Discussions	136
	Tables	141
	Figures	163
	References	170
VII.	BINDING ENERGY, COMPRESSIBILITY AND SPIN PARAMAGNETIC SUSCEPTIBILITY	173
7.1	Introduction	173
7.2	Theory	174
7.2.1	Binding energy	174
7.2.2	Compressibility	176
7.2.3	Spin paramagnetic susceptibility	176
7.3	Results and Discussions	181
	Tables	184
	References	190
