CERTIFICATE

This is to certify that the thesis with the title "**SYSTEM APPROACH TO RESOURCE PLANNING : A CASE STUDY OF SUGARCANE PROCESSING IN INDIA**" by **MR. SATBIR SINGH** has been prepared for the award of the degree of **DOCTOR OF PHILOSOPHY** under our supervision in conformity with the rules and regulations of **INDIAN INSTITUTE OF TECHNOLOGY, DELHI**. The research report and results presented in this thesis have not been submitted for any degree in any other University/Institution.

Dr. Jagpal Singh

ACKNOWLEDGEMENT

It is with the sense of deep gratitude that the author wishes to express his heartfelt indebtedness to his supervisors Dr. Jagpal Singh and Dr. Rajendra Prasad for their fraternal guidance, keen and educative discussions and sustained academic and moral support throughout the course of this work. It has been a great pleasure and privilege to work with them.

I wish to heartily acknowledge the critical suggestions and support extended to me by Prof. P.L. Dhar, Department of Mechanical Engineering in shaping the work to this form.

I express my personal gratitude to Dr. V.P.S. Sorayan and Dr. S.N. Naik for their support and encouragement in completing my work all these years. Special thanks are due to Antaryami Parida, Chief Sugar Technologist, Sugar Technology Mission, Department of Science and Technology, New Delhi for his keen interest and support by way of providing books and other reference material to complete my research.

I thank the distinguished faculty and staff of National Sugar Institute, Kanpur for providing me the facilities and all the necessary help in carrying out my observations to gather the need much needed information on sugarcane processing at their pilot plant.

I would like to place on record my greatfulness to Dr. N.K. Nair, National Productivity Council, New Delhi for making my research meaningful and providing me with the invaluable information to complete my work.

The author expresses his indebtedness to the entrepreneurs, managers, professionals and other employees of the 25 processing units which have been surveyed.

I am grateful to all my friends who helped me in so many ways. The work would have been incomplete without the support of my friends Arun Kumar Singh, Vivek Aggarwal, Rakesh Chaube, Sunil Panghal, Ajay Gupta, Dr. V.K. Vijay, Raju Gupta and Mr. Chanderprakash.

The endeavour would have not been complete without the support and sacrifices of my Aunty Santosh, my cousins Madhu, Indu and Somu.

Every iota that has gone into the making of a man that I am, I owe it all to my parents and brothers and sisters. I can never thank them enough. Without their blessings my attempts would not have borne fruits.

I would like to specially mention the name of my wife Pratibha Singh for her love and more than anything else being immensely encouraging during the final stages of my research work.

March 1999

SATBIR SINGH

ABSTRACT

For increase in the magnitude of savings and investment, introduction of either a new product or a new production process in the economy and achieving the objective of distributive justice, the planning frame which India tried during the last fifty years heavily depended on rate of savings and the assumption of Marginal Propensity to Save (MPS); rate of interest, price incentive and fiscal system respectively. Over dependence on these tools has forced the Indian Planners to design Investment Planning, Human Resource Development Research and Development, Institutional Framework and Fiscal System for producing capital, trained manpower, technologies and infrastructural facilities and services suited to the select use of inputs intensive production processes.

Select use of inputs intensive production processes has given birth to very wide inter and intra sectoral variation in the intensity of skill, energy, capital, pollution free environment and infrastructure per employed and underemployed worker. Intensities of all these inputs influence the Physical Quality of Human Resource(PQHR), and hence, labour productivity. As such, very wide inter and intra sectoral variation in inputs intensities has increased inter and intra sectoral variation in PQHR and labour productivity. Very wide inter and intra sectoral variation in inputs intensities, PQHR and labour productivity has further given birth to many socio-economic problems in the society. For example, very wide inter and intra sectoral variation in capital intensity has created the problem of unemployment and underemployment, inefficient use of capital in

capital intensive production processes and inefficient use of labour in labour intensive production processes. This has made the present planning frame socially irrelevant, unsustainable and uncompetitive.

Solution of all the above referred problems demands that the objective, strategy and measurement of planned economic development should be defined from the angle of distributive justice in terms of intensities, PQHR and labour productivity and accordingly different tools of policy-frame should be designed. Technologies are generated and upgraded by R&D institutions through R&D programmes. Trained human resources are generated and upgraded by the higher technical education institutions through their HRD programmes. Infrastructural facilities and services are generated and upgraded by the government through fiscal system. Capital is generated and upgraded by creating surplus resources for further investment through utilisation of available men and material resources. Available men and material resources can be allocated among different sectors of the economy or different regions of the country in two different ways: either through market mechanism or through investment planning. Application of investment planning for allocation of men and material resources among different sectors of the economy or regions of the country demands three tools: (i) a methodology for identifying appropriate production path for processing a particular raw material: (ii) pricing mechanism other than market mechanism and (iii) resource allocation mechanism. Utilisation of generated, upgraded and allocated men and material resources requires a grass root level organisational structure for providing piece wage employment to the unemployed and underemployed willing workers.

The present study has been designed primarily for defining the overall objective, strategy and measurement of development and the concept of PQHR from the angle of distributive justice in terms of techno-economic parameters and evolving the methodology for influencing policies and programmes related to Investment Planning, Human Resource Development, and Research and Development and illustrating its application in respect of processing of sugar cane. However, for ensuring the availability of all the inputs in integrated manner for promoting the adoption of Appropriate Production Path in each and every sector of the economy, the complementary mechanisms compatible and consistent to the proposed methodology, have been borrowed from the existing literature and included in the study. In order to examine the effectiveness of the evolved techno-economic parameters in explaining the production process from the planning angle; of the concept of PQHR in monitoring the policy frame and controlling the inefficient use of one or the other factors of production and of the evolved methodology for identifying Appropriate Production Path; R&D issues involved in making the identified path technically feasible and developing course material for B.Tech. and M.Tech. courses, the required data have been collected and analysed.

The results of the analysis put in the Sixth Chapter confirm the basic hypothesis of very wide inter and intra sectoral variation in inputs intensities, PQHR and labour productivity. Also the effectiveness of the evolved techno-economic parameters in expressing the production process from planning and implementation angles is confirmed by the results of the analysis. Results also confirm the effectiveness of PQHR for monitoring the policy frame and controlling the inefficient use of one or the other factor

of production. The methodology evolved for identifying the Appropriate Production Path; R&D issues involved in making the identified path technically feasible and developing course material for B.Tech. and M.Tech. courses seems to be capable enough in performing its function. In brief, the study proposes an altogether new planning and policy frames. Implementation of the proposed planning and policy frames would prove very effective and efficient in initiating and running socially relevant, sustainable and competitive process of development.

LIST OF SYMBOLS WITH THEIR MEANINGS	iv
ABSTRACT	vii
TABLE OF CONTENTS	xi
CHAPTER - 1	
INTRODUCTION	1
1.1 OBJECTIVES OF THE STUDY	5
1.2 METHODOLOGY IN BRIEF	6
1.3 IMPORTANCE OF THE STUDY	7
1.4 ORGANISATION OF THE THESIS	7
CHAPTER - 2	
PRESENT PLANNING AND POLICY FRAME IN INDIA	9
2.1 PRESENT PLANNING FRAME	10
2.1.1 Objectives of Planning	10
2.1.2 Strategy of Development Planning	13
2.1.3 Measurement of Development	23
2.2 PRESENT POLICY FRAME	26
2.2.1 Investment Pattern in Indian Plans	26
2.2.2 R&D Pattern in Indian Economy	29
2.2.3 Human Resources Development Pattern (Department of Education 1997)	38

CHAPTER - 3

PROPOSED PLANNING AND POLICY-FRAME IN INDIA	43
3.1 PROPOSED PLANNING FRAME	43
3.1.1 Proposed Objective of Planned Economic Development	44
3.1.2 Proposed Strategy of Planned Economic Development	45
3.1.3 Proposed Measurement of Economic Development	48
3.2 PROPOSED POLICY FRAME	49
3.2.1 Grass Root Level Organisational Structure (Singh, 1995:41)	49
3.2.2 Fiscal System (Singh 1992)	59
3.2.3 Pricing Mechanism other than Market Mechanism (Singh, 1991c)	61
3.2.4 Resources Allocation Mechanism (Nair et.al 1993)	63
3.2.5 Proposed Mechanism	68
3.3 THE CONCEPT OF PQHR (Singh and Singh - 1997b:37)	71
3.4 STRUCTURAL DYNAMICS OF THE INTERACTION BETWEEN SYSTEM APPROACH AND RESOURCE PLANNING	76

CHAPTER - 4

METHODOLOGY	79
4.1 CONCEPTUAL FRAMEWORK	79
4.1.1 Labour	80
4.1.2 Skill	80
4.1.3 Capital	82
4.1.4 Energy	83
4.1.5 Pollution	83
4.1.6 Infrastructure	84
4.1.7 Net Output	85
4.1.8 Costs	85
4.2 SELECTION OF SUGARCANE PROCESSING UNITS FOR THIS STUDY	85
4.3 DEVELOPMENT OF INTERVIEW SCHEDULE	87
4.4 FIELD VISIT	88

CHAPTER - 5

	PROFILE OF SUGARCANE PROCESSING IN NORTHERN PART OF INDIA	98
5.1	SUGARCANE PROCESSING PROCESS	100
5.2	GUR MANUFACTURING: 5 TCD SUGARCANE PROCESSING FACILITY	102
	5.2.1 Extraction of Juice	102
	5.2.2 Clarification of Juice	103
	5.2.3 Crystallisation of Massecuite	108
5.3	KHANDSARY MANUFACTURING PROCESS 50 TCD PLANT - OPEN PAN SULPHITATION	114
	5.3.1 Juice Extraction	114
	5.3.2 Juice Treatment	114
	5.3.3 Rab Boiling	115
	5.3.4 Crystallisation and Centrifugation	115
5.4	VACUUM PAN SULPHITATION BASED PRODUCTION PROCESSES: 100 TCD & 2500 TCD	118
	5.4.1 Cane Preparation	119
	5.4.2 Juice Extraction	119
	5.4.3 Juice Clarification	119
5.5	WHITE SUGAR MODERN MILL 2500 TCD PLANT	120
	5.5.1 Double Sulphitation Process	121
	5.5.2 Double Carbonation-Double Sulphitation	122
	5.5.3 Store Consumption	126
5.6	BROWN SUGAR/100 TCD VPS UNIT	126
5.7	POLLUTANTS FROM SUGAR INDUSTRY	127
	5.7.1 Excess Condensate Water	130
	5.7.2 Condensor Cooling Water	130
	5.7.3 Sulphur and Lime House	130
	5.7.4 Rotary Filter Washing	131
	5.7.5 Characterisation of Waste Water Streams	131
	5.7.6 Molasses	132
	5.7.7 Solid Wastes	133
	5.7.8 Air Pollutants	135

CHAPTER - 6

	APPROPRIATENESS OF THE EXISTING PRODUCTION PATHS	137
6.1	INTER SECTORAL VARIATION IN INPUT INTENSITIES AND EFFICIENCIES	138
6.1.1	Sectoral Distribution of Inputs	138
6.1.2	Inter Sectoral Variation in Inputs Intensities	141
6.1.3	Inter Sectoral Variation in Efficiencies of Different Inputs Including Labour	142
6.2	ACCEPTABLE RANGES RELATED TO DIFFERENT INTENSITIES	143
6.3	APPROPRIATENESS OF SECTORAL PRODUCTION PATHS	145
6.4	STANDARDISATION OF PRODUCTION STEPS	146
6.5	APPROPRIATENESS OF THE EXISTING PRODUCTION PATHS	148
6.5.1	Intrasectoral Variation in the Magnitude of Inputs	151
6.5.2	Pathwise Average Values of Intensities and Efficiencies	152

CHAPTER - 7

	IDENTIFICATION OF APP AND R&D ISSUES	154
7.1	PATHWISE REQUIREMENTS OF INPUTS INCLUDING LABOUR	154
7.2	PATHWISE VARIATION IN INPUTS INTENSITIES	157
7.3	PATHWISE VARIATION IN EFFICIENCIES OF DIFFERENT INPUTS	159
7.4	IDENTIFICATIONS OF APPROPRIATE PRODUCTION PATH	162
7.4.1	Probable Production Path(s) Near to Appropriate Production Path	163
7.4.2	Relative Status of Probable Production Path's	165
7.5	R&D ISSUES INVOLVED IN MAKING ADHOC APP [41 st PPP] TECHNICALLY FEASIBLE	168
7.6	SOLUTION OF THE IDENTIFIED R&D ISSUES	169
7.6.1	Technical Feasibility Study of Option 1	174
7.6.2	Inputs Requirement of Technically Feasible APP	180
7.6.3	Appropriateness of Technically Feasible APP	180

7.7	COMPARATIVE STUDY	181
7.8	DEVELOPMENT OF TEACHING MATERIAL FOR HIGHER TECHNICAL EDUCATIONAL COURSES	188
7.9	ALLOCATION OF INVESTABLE CAPITAL	189
7.10	APPLICATION OF THE PROPOSED ORGANISATIONAL STRUCTURE	189
