

**DIGITAL COMPUTER STUDY OF SWITCHING
SURGES IN NONLINEAR POWER SYSTEMS**

MOHAMMAD YUSUF KHAN B. E., M. Tech.

*THESIS SUBMITTED TO INDIAN INSTITUTE OF TECHNOLOGY, NEW DELHI
IN PARTIAL FULFILMENT FOR THE DEGREE OF*

Doctor of Philosophy

October, 1974.

ACKNOWLEDGEMENTS

With deep sense of gratitude the author thanks Dr. S.C. Tripathy for his excellent guidance and comments and for having given the author valuable ideas from time to time.

The author wishes to thank the authorities of Indian Institute of Technology for making financial aid and such other facilities available. In particular, thanks are due to the staff of Computer Centre, IIT, New Delhi for the generous cooperation they have extended throughout this work.

The author also expresses deep appreciation for the authorities of Regional Engineering College, Srinagar, Kashmir, for granting study leave.

The author is indebted to many of his friends for their cooperation they rendered at the various stages in the preparation of this manuscript. Names of Mr. A.G.Lone, Mr. P.K. Sharma, and Mr. S. Chockalingam are specifically mentioned in this regard.

My profound thanks are also due to my parents and other family members who have silently displayed tremendous patience in allowing me to stay away from home and pursue the studies.

I thank Miss Neelam and Mr. Joshi for their timely cooperation in typing this thesis.

Mr. Yoginder Singh Aswal's sincere efforts in cyclostyling this thesis also needs a special mention here.

(MOHAMMAD YUSUF KHAN)

The thesis is based on the following papers published by the author.

1. An Algorithm for Transients in Transmission System with Nonlinear Resistive Elements, International Journal of Electrical Engineering Education, Manchester (England). Vol. 11, 3, July 1974.
2. A Numerical Technique for Computing Surges in Multiphase Power Systems with Nonlinear Lumped Elements, Proc. IEE, London Ref: E90|P2158 (rev. P2059) (Accepted for publication, scheduled for Dec. 1974)
3. Digital Computer Study of Switching Surges on series Capacitor Compensated Lines, Proc. IEE, London. Ref: E90|01|P.2207 (Accepted for publication).
4. A Digital Computer Method for Electromagnetic Transients in Multiphase Nonlinear Power Systems, (Communicated to IEEE, Summer Power Meeting, 1975, San Francisco).

TABLE OF CONTENTS

		<u>Pages</u>
CHAPTER I	INTRODUCTION	1
1.1	Transients in Transmission Lines	1
1.2	Lumped Parameter Approach	2
1.3	Bewley-Lattice Diagram Method	4
1.4	Fourier Transform Method	5
1.5	Method of Characteristics	5
1.6	Comparison of the Methods	7
1.7	Outline of the various Chapters in the Dissertation	8
CHAPTER II	STATE VARIABLE MODELLING OF POWER SYSTEM ELEMENTS	10
2.1	Preliminary Remarks	10
2.2	Wave Equations	10
2.3	Lightning Arrester Model	12
2.4	Transformer Model	14
2.5	Semi-Implicit Runge-Kutta Method (Calahan's Version)	15
2.6	Applications	17
2.6.1	Computational Technique	17
2.6.2	Example	21
2.7	Dependence of Maximum Overvoltages on C_n	22
2.8	Conclusion	24
CHAPTER III	POLYPHASE SYSTEMS	25
3.1	Introduction	25
3.2	Modal Analysis	25
3.3	Applications	30

		<u>Pages</u>
3.3.1	Example	30
3.4	Computational Results	35
3.4.1	Single Pole Closure	36
3.4.2	Sequential Pole Closure	37
3.5	Conclusion	37
CHAPTER IV	SERIES CAPACITOR COMPENSATED POLYPHASE TRANSMISSION LINES	42
4.1	Introduction	42
4.2	Calculation of Switching Transients	43
4.2.1	Example	43
4.2.2	Computational Results	47
4.3	Conclusion	54
CHAPTER V	CASCADED SYSTEMS	57
5.1	Introduction	57
5.2	Two Transmission Lines Cascaded	57
5.3	Cascading of Long Line with Short Cable or Long Line with Short Line Through Wye-Delta Transformer	65
5.4	Long Transmission Line Connected Through Short Cable Length to Transformer	71
5.5	Ferroresonance in Line-cable System Cascaded Through Wye-Delta trans- former	74
5.6	Conclusion	78
CHAPTER VI	TRANSIENT STUDY OF FAULTED LINES	80
6.1	Introduction	80
6.2	Fault Transients with Zero Initial Conditions	81
6.3	Fault Transients with Non-Zero Initial Conditions	84
6.4	Conclusion	86

	<u>Pages</u>
CHAPTER VII	88
STUDY OF RESTRIKING PHENOMENON	88
7.1 Introduction	88
7.2 Steps for the Computation	88
7.3 Conclusion	94
CONCLUSIONS	95
