CERTIFICATE

This is to certify that the thesis entitled “**Factors for the Success of a Construction Project: An Empirical Study**” being submitted by **Mr.Kumar Neeraj Jha** to the Indian Institute of Technology, Delhi for the award of the degree of Doctor of Philosophy is a bonafide record of the research work carried out by him under my supervision and guidance. The thesis work, in my opinion, has reached the requisite standard, fulfilling the requirements of the said degree. The results contained in the thesis have not been submitted, in part or full, to any other University or Institute for the award of any degree or diploma.

Dr.K. Chandrashekhara Iyer
Assistant Professor
Department of Civil Engineering
Indian Institute of Technology, Delhi
Hauz Khas, New Delhi – 110016 (India)

ACKNOWLEDGEMENTS

The thesis is the culmination of my life long desire to excel in my educational endeavor. I am greatly indebted to Dr. K.C. Iyer, my supervisor for his constant support, encouragement, and consistent inspiring guidance and utmost cooperation at every stage throughout the duration of the research work. I am also indebted to his family members for accommodating me at odd hours during the course of writing the thesis.

I am thankful to my SRC members, Prof A.K. Gosain and Dr. B. Bhattacharjee of Department of Civil Engineering and Prof Arun Kanda, Department of Mechanical Engineering for providing me with their valuable inputs from time to time throughout my stay in IIT campus.

I wish to extend my sincere thanks to Prof K.G. Sharma, Head of the Department, Prof V.B. Deshpande, Prof A.K. Jain and other faculty members and staff of the Department of Civil Engineering for their cooperation. My grateful thanks are also due to Prof S.G. Deshmukh of Department of Mechanical Engineering for his valuable suggestions during my pre Ph.D. presentation. I express my sincere thanks to Prof B. Majumdar of Indian Statistical Institute, New Delhi and Mr. S. Srinivas Pradeep, a young statistician of Pune University for suggesting relevant statistical methods for data analysis at a crucial juncture.

As is the case with any empirical research, the respondents and interviewees played a major role in providing me with the significant inputs. I am grateful to all the respondents and interviewees who contributed by filling in the questionnaire and sparing their valuable time for giving insight into my research problem.

I am sincerely thankful to the management of Larsen and Toubro Limited for permitting me to pursue this study. The support received from the Delhi regional office staff during my study is thankfully acknowledged.

In the course of writing this thesis I had acquired many obligations and the words cannot adequately acknowledge my gratitude to all my friends who had helped me in many ways. I express my sincere thanks to Lalit for all his constructive criticism received during my study period. My thanks are also due to Vikas and Alok. I express my sincere thanks to R. Balamurugan for his ever-helping attitude.

It would not be possible to name the many fellow researchers and individuals who helped me directly or indirectly. Their valued assistance is very much appreciated and thankfully acknowledged.

I do not have the appropriate words to show my gratitude to my parents for supporting me throughout my life in all my endeavors. Support received from other family members and relatives are also acknowledged. I am greatly indebted to my wife Arti and my son Master Gullu for their understanding shown during my study period. During the typesetting of the thesis Ms. Arti and Mr. Arvind both helped me a lot and I thankfully acknowledge them.

(Kumar Neeraj Jha)

ABSTRACT

Construction is the second largest industry in India. The performance of Indian construction projects though improving steadily, it is still to catch up with the best in the world. Also there are not many research studies in the area of construction management in India that could help in understanding the causes of such slow improvement in performance. This study has been an exploratory work in India and has attempted to identify and evaluate the success and failure attributes that would form a guideline for further study and to some extent help professionals to understand some critical factors having impact on the project performance. A total of 55 attributes affecting the performance of a construction project are analysed for their criticality in influencing the four performance criteria: schedule, cost, quality, and no-dispute through a two-stage questionnaire survey. These attributes on application of factor analysis have revealed a set of 11 success factors and 9 failure factors. Some of the critical factors derived from the study are: *commitment of the project participants; owner's competence; coordination among project participants; favorable working condition; project manager's competence; top management support; conflict among project participants; and interaction between project participants*. The extent of contribution of these critical factors is found to vary with the current level performance ratings of the project. The impact of unit improvement in critical factors on the achievement of the project performance criteria has also been evaluated. The study besides supporting the intuition of past researchers in recognizing 'coordination' as a key success factor, has revealed that coordination is not an isolated and independent activity, but is a typical management function having its inherent role in all the major management activities that are broadly represented by the four factors, viz. *planning; resource handling; contract implementation; and team building*. Subsequently in the later part of the study, various coordination activities and their relative impact in

achieving day-to-day coordination have been evaluated. Key elements affecting coordination have also been identified and their influence on coordination effort has been studied. Besides, the present study has also identified the three broad skill group: *team building skill*; *contract implementation skill*; and *project organization skill* required of an effective project coordinator. The results are validated through case studies of live projects and structured interviews of experts in the field of construction management.

Key words: Project coordination, project success and failure factors, questionnaire survey, factor analysis, multinomial logistic regression, project coordinator's trait, case study.

TABLE OF CONTENTS

	Page
ACKNOWLEDGEMENTS.....	i
ABSTRACT.....	iii
LIST OF FIGURES.....	x
LIST OF TABLES.....	xi
CHAPTER 1	INTRODUCTION
1.1 Introduction	1
1.2 Motivation for the Study	2
1.3 Research objectives	3
1.4 Organisation of the thesis	4
CHAPTER 2	LITERATURE REVIEW
2.1 Introduction	5
2.2 A construction project	5
2.2.1 Phases of a construction project	6
2.3 Understanding project success	7
2.3.1 Criteria for project performance evaluation	9
2.3.2 Role of project management	13
2.4 Project performance attributes	14
2.4.1 Success attributes	14
2.4.2 Failure attributes	19
2.5 Effect of other elements on project performance	21
2.6 Coordination: a key attribute recognised	22
2.7 Coordination activities in a construction project	26
2.8 Traits of a project manager	27
2.9 Studies on allied areas	32
2.9.1 Success index	33
2.9.2 Studies undertaken in India	33
2.10 Summary and guidelines for research	35

CHAPTER 3

RESEARCH METHODOLOGY

3.1	Introduction	37
3.2	Need for questionnaire survey	39
3.3	Development of first stage questionnaire	40
	3.3.1 Respondent's personal details and professional experience	40
	3.3.2 Project details and traits of a project coordinator	40
	3.3.3 Relative importance of various project stages	41
	3.3.4 Relative importance of project performance evaluation parameters	41
	3.3.5 Project performance attributes	42
	3.3.6 Coordination activities	42
	3.3.7 Parameters influencing coordination	43
3.4	Development of second stage questionnaire	44
	3.4.1 Personal and project details	44
	3.4.2 Project performance factors	45
	3.4.3 Important coordination activities	45
3.5	Responses received	45
	3.5.1 Respondents' profile	46
3.6	Analysis techniques	48
	3.6.1 Univariate analysis	48
	3.6.2 Multivariate analysis	49
3.7	Case studies: validation of research findings	53
3.8	Research methodology summary	53

CHAPTER 4

MAJOR ATTRIBUTES OF PROJECT PERFORMANCE

4.1	Introduction	55
4.2	Identification of relative importance of project performance attributes	55
4.3	Intrinsic characteristics of success and failure attributes	62
	4.3.1 Success factors – schedule criterion	63
	4.3.2 Failure factors – schedule criterion	67
	4.3.3 Success factors – cost criterion	70
	4.3.4 Failure factors – cost criterion	74
	4.3.5 Success factors – quality criterion	78

4.3.6 Failure factors – quality criterion	81
4.3.7 Success factors – no-dispute criterion	84
4.3.8 Failure factors – no-dispute criterion	86
4.4 Evaluation of criticality of success and failure factors	90
4.4.1 Interpretation of multinomial logistic regression models	91
4.4.2 Schedule criterion	93
4.4.3 Cost criterion	98
4.4.4 Quality criterion	101
4.4.5 No-dispute criterion	103
4.5 Summary and conclusions	106

CHAPTER 5 PROJECT COORDINATION FOR SUCCESS

5.1 Introduction	110
5.2 Relative importance of project coordination activities	111
5.3 Differences in perception on various coordination activities	117
5.3.1 Schedule criterion	117
5.3.2 Cost criterion	120
5.3.3 Quality criterion	121
5.3.4 No-dispute criterion	122
5.4 Identification of important coordination activities for overall success	123
5.5 Evaluation of criticality of coordination activities	126
5.6 Assessment of probabilities of coordination ratings	130
5.7 Taxonomy of coordination activities	132
5.8 Summary and conclusions	136

CHAPTER 6 OTHER ISSUES IN PROJECT COORDINATION

6.1 Introduction	138
6.2 Identification of key elements affecting coordination	139
6.3 Important traits of a project coordinator	142
6.4 Dominant traits of coordinators in successful and failure projects	145
6.5 Major trait/skill category	148
6.5.1 Team building skill	149

6.5.2 Contract implementation skill	150
6.5.3 Project organization skill	151
6.6 Summary and conclusions	152

CHAPTER 7 VALIDATION OF RESULTS

7.1 Introduction	153
7.2 Validating the research results	154
7.3 Conclusions from case studies	154
7.4 Conclusions from structured interviews	158
7.5 Summary and conclusions	159

CHAPTER 8 SUMMARY AND CONCLUSIONS

8.1 Summary of Work Done	160
8.1.1 Identification of critical factors responsible for success or failure of projects	161
8.1.2 Evaluation of relative impact of success and failure factors on performance of project	162
8.1.3 Evaluation of impact of coordination and coordination related activities on success of projects	163
8.2 Conclusions	165
8.3 Limitations	167
8.4 Suggestions for further studies	168
